

TABLE OF CONTENTS

Abstract	i-iii
Dedication	iv
Declaration	v
Certificate	vi
Acknowledgement	vii-viii
Content	ix- xiii
List of Table	xiii-xiv
List of Figures	xiv-xv
Abbreviation	xv-xvii

CONTENTS	
CHAPTER I INTRODUCTION	Page No.
1.0 Introduction	1-2
1.1 The concept of Experiential Learning	3-7
1.2 Genesis of Experiential Learning	8-15
1.3 Experiential learning in India: historical evolution and policy initiatives	15-23
1.4 Concept of Social Science	23-27
1.5 Social science curriculum for class viii	27-29
1.6 Importance of experiential learning in social science	29-34
1.7 Conceptual framework of the study	34-37
1.8 Rationale of the study	37-41
1.9 Statement of the problem	41
1.10 Operational definition of the terms used	41-42
1.11 Objectives of the study	42
1.12 Hypotheses of the study	42-43
1.13 Delimitation of the study	43-44
1.14 Organization of the thesis	44
CHAPTER II REVIEW OF RELATED LITERATURE	Page No.

2.0 Introduction	45-66
2.1 Summary and research gap	66-67
CHAPTER III RESEARCH METHODOLOGY	Page No.
3.0 Introduction	68
3.1 Design of the study	68-69
3.2 Geographical context of the study	70
3.3 Population of the study	70-71
3.4 Sample of the study	71-72
3.5 Sampling technique	72-73
3.6 Variables used in the study	73-74
3.7 Tools used	74-91
3.7.1 Tool No. I - Achievement Test in Social Science subject	74-87
3.7.2. Tool No. II	88
3.7.3. Tool No. III	89
3.7.4. Tool No. IV	89
3.7.5 Instructional module based on experiential learning approach (intervention)	89-91
3.8 Procedure of data collection/ experimentation	91-93
3.9 Statistical techniques used	93-94
3.10 Ethical consideration	94
CHAPTER IV ANALYSIS AND INTERPRETATION OF DATA	Page No.
4.0 Introduction	95
4.1 Comparison of mean scores of achievement in social science of experimental group and control group at pre-test and posttest stages	95-97
4.2 Comparison of adjusted mean scores of achievement in social science of belonging to experimental group and control group by considering pre-achievement in social science as the covariate.	97-99
4.3 Comparison of adjusted mean scores of	99-100

achievement in social science of students belonging to experimental group and control group by considering intelligence as covariate	
4.4 Effect of treatment, gender and their interaction on achievement in social science by considering pre-achievement in social science and intelligence as covariates	100-101
4.5 Effect of treatment, intelligence and their interaction on achievement in social science by considering pre-achievement in social science as covariate	102-104
4.6 Effect of treatment, study habits and their interactions on achievement in social science by considering pre-achievement in social science as covariate	104-107
4.7 Reaction of students belonging to experimental group towards experiential learning approach used by the researcher	107-116
CHAPTER V RESULTS AND DISCUSSION	Page no.
5.0 Introduction	117
5.1 Comparison of mean scores of achievement in social science of experimental group and control group at pre-test and post-test stages	117-119
5.2 Comparison of adjusted mean scores of achievement in social science of belonging to experimental group and control group by considering pre-achievement in social science as the covariate	119-120
5.3 Comparison of adjusted mean scores of achievement in social science of students belonging to experimental group and control group by considering intelligence as covariate	120-121
5.4 Effect of treatment, gender and their interaction on	121-122

achievement in social science by considering pre achievement in social science and intelligence as covariates	
5.5 Effect of treatment, intelligence and their interaction on achievement in social science by considering pre achievement in social science as covariate	122-124
5.6 Effect of treatment, study habits and their interactions on achievement in social science by considering pre achievement in social science as covariate	125-127
5.7 Reaction of students belonging to experimental group towards experiential learning approach used by the investigator	127-128
5.8 Overall results and discussion of the study	128-130
5.9 Educational implications of the study	131-132
5.10 Limitations of the present study	132-133
5.11 Suggestions for further research	133
CHAPTER VI SUMMARY AND CONCLUSION	Page No.
6.0 Introduction	134
6.1 The concept of experiential learning	135-136
6.2 Rationale of the study	137-141
6.3 Statement of the problem	141
6.4 Operational definition of the terms used	141
6.5 Objectives of the study	142
6.6 Hypotheses of the study	142-143
6.7 Delimitations of the study	143
6.8 Design of the study	144
6.9 Population of the study	144
6.10 Sample of the study	144
6.11 Sampling technique	145
6.12 Tools used	145-150

6.13 Procedure of data collection	150-151
6.14 Statistical techniques used	151
6.15 Overall results and discussion of the study	151-154
6.16 Educational implications of the study	154-155
6.17 Limitations of the present study	156
6.18 Suggestions for further research	156
6.19 Conclusion	157-159
Bibliography	160-183
Appendices	184-259

LIST OF TABLES

Table No.	Name of Tables	Page No.
3.1	Research design	69
3.2	Details of selected contents	75-76
3.3	Details of instructional objectives	76-79
3.4	Details of questions	81
3.5	Item wise Difficulty Value of the Achievement test in Social Science	82
3.6	Discrimination Index for item analysis	83
3.7	Item wise Discriminative Power Index of the Achievement test in Social Science	84
3.8	Item wise Distractor analysis of Achievement test in Social Science	85-86
3.9	Scoring pattern of the reaction scale	88
3.10	Details of lessons	89-90
3.11	Development Process Steps	90
3.12	Details of strategies used	91-92
4.1	Table showing paired t-test result of Experimental group (EG) and Control group (CG) at pre-test and post-test level	95

4..2	Adjusted mean scores of achievement in Social Science	98
4.3	Result of one-way ANCOVA of achievement in Social Science by considering pre-achievement in Social Science as the covariate.	98
4.4	Result of one-way ANCOVA of achievement in Social Science by considering intelligence as the covariate.	99
4.5	Result of 2X2 Factorial Design ANCOVA of Achievement in Social Science by considering pre- achievement in Social Science and intelligence as covariates.	100
4.6	Result of 2X3 Factorial Design ANCOVA of achievement in Social Science by considering pre-achievement in Social Science as covariates	102
4.7	Pair wise comparison of the adjusted mean scores in Social Science of High Average, Average and Low Average Intelligence students	103
4.8	Result of 2X3 Factorial Design ANCOVA of achievement in Social Science by considering pre-achievement in Social Science as covariate	105
4.9	Pair wise comparison of the adjusted mean scores of students belonging to Good Study habits, Average Study habits and Unsatisfactory Study habits	106
4.10	Statement wise Mean, Standard Deviation and Coefficient of Variation values of students Reaction towards Video Instructional Material	108
4.11	Range and interpretation source for the mean favorable reaction (Intensity Index II)	108
4.12	Statement wise percentage of responses, Mean and Percentage of Favorable Reaction of students belonging to Experimental Group.	109-111

LIST OF FIGURES

Figure No.	List of figures	Page No.
1.1	Strategies of Experiential Learning	7
1.2	Kolb's Learning Cycle	15
1.3	Core benefits of Experiential Learning	34
3.1	Experimental design used in the study	69
3.2	Location of the selected school for the study in Sonitpur district	70
3.3	Description of sample	72
3.4	Tool Development & standardization	87
3.5	Procedure adopted for experimentation	93
3.6	Statistical techniques used	94
4.1	Mean Score and Standard Deviation (S.D) of achievement of Experimental group and Control Group at pre-test and post-test level	97
4.2	Graphical representation of the statement wise frequencies of responses	112
