Chapter 1: Introduction	[1-33]
1.1. Introduction: Energy conversion and storage devices	1
1.2. Overview of fuel cell (FC)	1-6
1.2.1 Working principle of fuel cell	1-2
1.2.2 Classification of fuel cells	3-6
1.3. Direct methanol fuel cell (DMFC)	6-15
1.3.1 Methanol oxidation reaction (MOR)	6-7
1.3.2. Different components of DMFC	7-12
1.3.2.1 Membrane Electrode Assembly (MEA)	7-8
1.3.2.1.1 Polymer Electrode Membrane	8-9
1.3.2.1.2 Electrode	9-10
1.3.2.1.3 Gas Diffusion Layer	10-11
1.3.2.1.4 Catalyst layer	11
1.3.2.2 Gasket	11
1.3.2.3 Bipolar plate	12
1.3.2.4 Current collector	12
1.3.2.5 End plate	12
1.3.3 Applications of DMFC	12-14
1.3.4 Challenges pertaining to DMFC and scope of improvement	14-15

1.4 Energy storage device supercapacitor	15-20
1.4.1 Working principle of supercapacitor	16-19
1.4.1.1 Electric Double Layer Capacitor (EDLC)	16-17
1.4.1.2 Pseudocapacitor	18
1.4.1.3 Hybrid supercapacitor	18-19
1.4.2 Merits, demerits and scope of improvement	19-20
1.5 Electrode materials considered in the thesis	20-24
1.5.1 Transition metal oxide	20-21
1.5.2 Reduced Graphene Oxide	21-22
1.5.3 MXene	22-24
1.6 Scope of the thesis and statement of thesis problem	24-26
1.7 References	26-33
Chapter 2: Ti₃C₂/Co₃O₄ nanocomposite as anode catalyst for methanol oxidation	[34-67]
2.1 Introduction	34-35
2.2 Experimental section	35-37
2.2.1 Material synthesis	35-36
2.2.1.1 Synthesis of MXene Ti ₃ C ₂ NH ₄ T _x	35
2.2.1.2 Synthesis of Co ₃ O ₄	36
2.2.1.3 Synthesis of Ti ₃ C ₂ /Co ₃ O ₄ (TC)	36
2.2.2 Material characterizations	37
2.2.3 Electrochemical characterizations	37
2.3 Results and Discussion	38-59
2.3.1 Morphological characterizations	38-40
2.3.2 Physical characterizations	40-46
2.3.2.1 X-ray Diffraction (XRD)	40-42
2.3.2.2 Fourier transform infrared spectroscopy (FTIR)	42-43
2.3.2.3 X-ray photoelectron spectroscopy (XPS)	43-45
2.3.2.4 Nitrogen (N ₂) adsorption-desorption analysis	45-46
2.3.3 Electrochemical characterizations	46-56
2.3.3.1 Electrochemical activity of the electrodes in absence of methanol	46-51
2.3.3.2 Electrochemical activity of the electrodes in presence of methanol	51-56
2.3.4 Characterizations of the electrode after cycling stability	56-59
2.4 Conclusion	59-60

2.5 References	60-67
Chapter 3: NiCo₂O₄/NiO/rGO as non-precious metal-based anode catalyst for methanol oxidation	[68-101]
3.1 Introduction	68-70
3.2 Experimental section	70-71
3.2.1 Material synthesis	70
3.2.1.1 Synthesis of NiCo ₂ O ₄ /NiO (CNO)	70
3.2.1.2 Synthesis of NiCo ₂ O ₄ /NiO/rGO (CNOG)	70
3.2.2 Material characterizations	70-71
3.2.3 Electrochemical characterizations	71
3.3 Results and Discussion	71-95
3.3.1 Morphological characterizations	71-77
3.3.2 Physical Characterizations	77-81
3.3.2.1 X-ray Diffraction (XRD)	77-78
3.3.2.2 Fourier transform infrared spectroscopy (FTIR) and Raman Spectroscopy	78-79
3.3.2.3 X-ray photoelectron spectroscopy (XPS)	79-81
3.3.2.4 Nitrogen (N ₂) adsorption-desorption analysis	81
3.3.3 Electrochemical characterizations	82-91
3.3.3.1 Electrochemical activity of the electrodes in absence of methanol	82-85
3.3.3.2 Electrochemical activity of the electrodes in presence of methanol	85-91
3.3.4 Characterizations of the electrode after cycling stability	91-95
3.4 Conclusion	95-96
3.5 References	96-101
Chapter 4: NiCo₂O₄/NiO/MXene as non-precious metal-based anode catalyst for methanol oxidation	[102-123]
4.1 Introduction	102-104
4.2 Experimental section	104-105
4.2.1 Material synthesis	104
4.2.1.1 Synthesis of NiCo ₂ O ₄ /NiO/MXene (CNOT))	104
4.2.2 Material characterizations	104
4.2.3 Electrochemical characterizations	105

4.3 Results and Discussion	105-119
4.3.1 Morphological characterizations	105-108
4.3.2 Physical Characterizations	108-110
4.3.2.1 X-ray Diffraction (XRD)	108-109
4.3.2.2 Fourier transform infrared spectroscopy (FTIR)	109
4.3.2.3 Nitrogen (N ₂) adsorption-desorption analysis	109-110
4.3.3 Electrochemical characterizations	110-115
4.3.3.1 Electrochemical activity of the electrodes in absence of methanol	110-112
4.3.3.2 Electrochemical activity of the electrodes in presence of methanol	112-115
4.3.4 Characterizations of the electrode after cycling stability	115-119
4.4 Conclusion	119-120
4.5 References	120-123
Chapter 5: NiCo₂O₄/NiO/rGO as non-precious metal-based electrode for supercapacitor application	[124-144]
5.1 Introduction	124-126
5.2 Experimental section	126-127
5.2.1 Electrochemical characterizations	126-127
5.3 Results and Discussion	127-138
5.3.1 Electrochemical characterizations	127-138
5.3.1.1 Three-electrode electrochemical behaviour of the electrodes	127-131
5.3.1.2 Electrochemical behaviour of the symmetric supercapacitor	131-138
5.3.1.2.1 3M KOH aqueous electrolyte	131-136
5.3.1.2.2 PVA/3M KOH gel polymer electrolyte	136-138
5.4 Conclusion	139
5.5 References	139-144
Chapter 6: NiCo₂O₄/NiO/MXene as non-precious metal-based electrode for supercapacitor application	[145-166]
6.1 Introduction	145-147
6.2 Experimental section	147-148
6.2.1 Electrochemical characterizations	147-148
6.3 Results and Discussion	148-160
6.3.1 Electrochemical characterizations	148-160
6.3.1.1 Three-electrode electrochemical behaviour of the electrodes	148-153

6.3.1.2 Electrochemical behaviour of the symmetric supercapacitor	153-160
6.3.1.2.1 3M KOH aqueous electrolyte	153-156
6.3.1.2.2 PVA/3M KOH gel polymer electrolyte	156-160
6.4 Conclusion	161
6.5 References	161-166
Chapter 7: Conclusions and future prospects	[167-170]
7.1 Conclusions	167-170
7.2 Future prospects	170
