Abstract	iii-v
Declaration by the candidate	vi
Certificate of the Supervisor	vii
Certificate of the Co-supervisor	viii
Certificate of the External	ix
Acknowledgement	x-xii
Table of Contents	xiii-xvii
List of Tables	xviii
List of Figures	xix-xx
List of Abbreviations and Symbols	xxi-xxii

CHAPTER 1

INTRODUCTION AND REVIEW OF LITERATURE	1-28
1.1 Introduction	2-7
1.2 Objective of the thesis	8-9
1.3 Review of literature	9-17
1.4 Bibliography	17-28

CHAPTER 2

ESTIMATION OF TI/TV RATIO BY ACCOUNTING DEGENERACY AND PRETERMINATION NATURE OF CODONS	29-59
2.1 Abstract	30-31
2.2. Introduction	31-34
2.3. Materials and Methods	
2.3.1. Coding sequences of <i>E. coli</i> genome and finding	

out ti and tv	34-36
2.3.2. Improved estimators	37-38
2.3.4. Comparative representation of different $\frac{ti}{tv}$ through the conventional and the improved estimators	38
2.3.5. Statistical analyses	39
2.4. Results	
2.4.1. Impact of codon degeneracy and PTC on $\frac{Sti}{Stv}$ and $\frac{Nti}{Ntv}$ values in <i>E. coli</i>	39-44
2.4.2. Sti , Stv , Nti and Ntv frequency in coding sequences	44-48
2.5. Discussion	48-52
2. 6. Data and software availability	52
2.7. Bibliography	53-59

CHAPTER 3

ANALYSIS OF NON-SYNONYMOUS VARIATIONS IN GENOME SEQUENCES

OF <i>Escherichia coli</i>	60-94
3.1. Abstract	61-62
3.2. Introduction	62-67
3.3. Materials and Methods	
3.3.1. Coding sequence information	67
3.3.2. Finding Nti' and Ntv' in coding sequences and the estimation of $\frac{Nti'}{Ntv'}$ for all the codons	67-68
3.3.3. Visualizing the frequent amino acid exchangeability in	

<i>E. coli</i> coding sequences	68-69
3.4. Results	
3.4.1. Frequency of non-synonymous variations in different degenerate codons of <i>E. coli</i>	69-75
3.4.2. Non-synonymous codon frequency reveals the amino acid exchangeability in <i>E. coli</i>	75-88
3.5. Discussion	88-91
3.6. Bibliography	91-94

CHAPTER 4

A COMPARATIVE POLYMORPHISM SPECTRA ANALYSIS IN INTER-OPERON IGRS AND INTRA-OPERON IGRS	95-111
4.1. Abstract	96-97
4.2. Introduction	97-100
4.3. Materials and methods	
4.3.1. Annotating inter-operon IGRs	100
4.3.2. Annotating intra-operon IGRs	101
4.3.3. Finding base substitutions in a sequence alignment	101
4.3.4. Comparison of polymorphism spectra at the intra-operon IGRs and inter-operon IGRs	102
4.4. Results	

4.4.1. SNPs frequency is lower at the intra-operon IGRs than the inter-operon IGRs	102
4.4.2. Comparative polymorphism spectra analysis of inter-operon IGRs and intra-operon IGRs	103-104
4.4.3. $\frac{ti}{tv}$ values at inter-operon and intra-operon IGRs in <i>E. coli</i> and <i>S. enterica</i>	105-107
4.4.4. Intra-operon polymorphism is biased towards purine and keto nucleotides	107
4.5. Discussion	108-110
4.6. Bibliography	110-111
CHAPTER 5	
A COMPARATIVE SYNONYMOUS POLYMORPHISM SPECTRA ANALYSIS IN CO-TRANSCRIBED GENE PAIRS	
	112-128
5.1. Abstract	113
5.2. Introduction	114-116
5.3. Materials and Methods	
5.3.1. Selection of co-transcribed gene pairs	116
5.3.2. Derivation of reference sequence and finding the overall synonymous spectra	116-117
5.3.3. Finding the ratio of transition to transversion in gene pairs	117
5.3.4. Polymorphism frequency comparison at the codon level	117-118
5.4. Results	
5.4.1. Synonymous polymorphism spectra difference between co-transcribed genes	118

5.4.2. $\frac{ti}{tv}$ ratio difference between the co-transcribed genes	
due to codon degeneracy composition difference	119-120
5.4.3. Synonymous polymorphism difference between co-transcribed genes in FFD, TFD and SFD (FB) codons	120-122
5.4.4. Phylogeny comparison between co-transcribed genes	123-125
5.5. Discussion	125-126
5.6. Bibliography	127-128
CHAPTER 6	129-132
CONCLUSION AND FUTURE PROSPECTS	
APPENDICES	133-175
LIST OF PUBLICATIONS	176-177
