CHAPTER 1

	Introduction	Content	Page no
	1	General Introduction	1
	1.1.	Context of the Thesis	1
	1.2.	Toxicological aspect of studied heavy metal pollution on human health and environment	2
	1.3.	Techniques for the removal of heavy metals from polluted water	2 -- 4
	1.4.	Significance of the study	4
	1.5.	Research objectives	5
	1.6.	Research hypothesis	5
		References	6--7

CHAPTER 2

Literature review

2	Introduction	8
2.1.	Landfill leachates	8
2.2.	Types of pollutants in leachate and its pollution indices	8
2.3.	Effects of heavy metals on human health	9
2.4.	Effects of heavy metals on seed germination	11
2.5.	Treatments for remediation of heavy metals	12
2.6.	Biosorbents for the removals of heavy metals	12
2.7.	Heavy metal remediation: Adsorption	15
2.8.	Bio composite: a green and low-cost solution.	16
2.9.	Conductive polymers and its importance	16--17
2.10.	Adsorption studies	18
2.10.1.	Kinetic studies	18
2.11.	Regeneration studies	19
	References	20--26

CHAPTER 3

Materials and methods

3	Area of the study	27
3.1.	Sample collection techniques of landfill leachate, groundwater and soil	27
3.1.1	Leachate and ground water (APHA, 1995)	27
3.1.2.	3.1.2. Soil (Method EPA 3051A)	28
3.2.	Methodology for environmental and ecological risk assessments	28
3.2.1.	Quantification of metal pollution in soil	28
3.2.1.1.	Enrichment factor (EF)	28
3.2.1.2.	Enrichment factor percentage (EF %)	28
3.2.1.3.	Metal pollution index (MPI)	29
3.2.1.4.	Ecological risk assessment	29
3.2.1.5.	Human health risk assessment	29--30
3.2.2.	Estimation of leachate pollution index	31
3.2.2.1.	Leachate pollution index	31
3.2.3.	Indexing approach of Ground water	31
3.2.3.1.	Heavy metal pollution index (HPI) in Ground water	31--32
3.2.3.2.	Contamination index (CI)	32

3.2.3.3.	Non-carcinogenic health risk	32
3.2.3.4.	Carcinogenic health risk	33
3.3.	Quality Control and Quality Assurance	34
3.4.	Analytical method for chemical analysis of soil, ground water and leachate	34
3.4.1.	pH	34
3.4.2.	Electrical conductivity	34
3.4.3.	Bulk density	35
3.4.4.	Soil organic carbon	35
3.4.5.	Available nitrogen	35
3.4.6.	Available phosphorus	35
3.4.7.	Available potassium	35
3.5.	Germination Studies	36
3.5.1.	Pot germination	36
3.5.2.	Petri dish germination	36
3.6.	Heavy metal determination	36
3.7.	Synthesis mechanism of conductive biocomposite	37
3.7.1.	Reagents	37
3.7.2.	Synthesis procedure of polyaniline biocomposite	37

3.8.	Parameters selected for characterization of biosorbents	40
3.8.1.	Surface morphology and surface elemental composition study	41
3.8.2.	Surface functional group study by FTIR	41
3.9.	Reagents and Instruments	42
3.9.1.	Preparation of heavy metal solution	42
3.10.	Batch adsorption experiments	44
3.10.1.	Contact time	45
3.10.2.	Absorbent dosage	45
3.10.3.	Initial metal concentration	45
3.10.4.	pH of the solution	45
3.11.	Adsorption models	45
3.11.1.	Adsorption Kinetic Models	46
3.11.1.1.	Lagergren's pseudo first-order model	46
3.11.1.2.	Lagergren's Pseudo-second-order model	46
3.11.2.	Adsorption isotherm models	47
3.11.2.1.	Langmuir isotherm	47
3.11.2.2.	Freundlich isotherm	47
3.12.	Regeneration studies	49

3.13.	Statistical Analysis	49
	References	50

CHAPTER 4

Results and discussion of objective 1

4.1.	Physicochemical attributes of ground water, leachate and soil	51
4.2.	Metal content in MSW dumping site leachate and soil and ground water	51
4.3.	Heavy metals risks assessment strategies for different environmental matrices	53
4.3.1.	Enrichment factor (EF/EF %) in soil	53
4.3.2.	Health risk assessment	53
4.4.	Leachate pollution index	56
4.5.	Heavy metal pollution index	58
4.5.1.	Index of contamination	58
4.5.2.	Human health risk assessment of ground water	60
4.5.2.1.	Non-carcinogenic health risk	60
4.5.2.2.	Carcinogenic health risk	60
4.6.1.	Correlation analyses	61
4.6.2.	Cluster analysis	63
4.6.3.	Principal component analysis (PCA)	64
4.7.	Phytotoxicity study	66
4.8.1.	Pot experiments	66
4.8.2.	Petri dish experiments	70
4.9.	Summary of the chapter	72
	References	73

CHAPTER 5

Results and discussion of objective 2

5.1.	Characterization of PANi biocomposites (doped and undoped)	74
5.1.1.	Surface morphology by Scanning electron Microscope and EDX spectroscopy	74
5.1.2.	Transmission electron microscope	76
5.1.3.	Chemical structure using FTIR	77
5.1.4.	Physical structure using XRD	78
5.2.	Application of PANi biocomposites (doped and undoped) for removal of toxic heavy metal from landfill leachate	79
5.2.1.	Scanning electron Microscope	79

5.2.2.	Surface morphology and EDX spectroscopy	79
5.3.	Adsorption study	82
5.4.	Summary of the chapter	87
	References	88
CHAPTER 6		
Results and discussion of objective 3		
6	To conduct adsorption studies and effect of operational parameters: contact time, dosage, pH and initial ion concentration on uptake capacity	89
6.1.	Contact time	89
6.1.1.	Effect of contact time on biosorption of Cd onto SC dope, SC UD, SD dope and SD UD	89
6.1.2.	Effect of contact time on biosorption of Pb onto SC dope, SC UD, SD dope and SD UD.	95
6.2.	Bio adsorbent dose	97
6.2.1.	Effect of biosorbent dosage on biosorption of Cd onto SC dope, SC UD, SD dope and SD UD	97
6.2.2.	Effect of biosorbent dosage on biosorption of Pb onto SC dope, SC UD, SD dope and SD UD	98
6.3.	pH of the metal solution	99
6.3.1.	Effect of pH on biosorption of Cd onto SC dope, SC UD, SD dope and SD UD.	100
6.3.2.	Effect of pH on biosorption of Pb onto SC dope, SC UD, SD dope and SD UD.	101
6.4.	Initial ion concentration	102
6.4.1.	Effect of initial ion concentration on biosorption of Cd onto SC dope, SC UD, SD dope and SD UD.	103
6.4.2.	6.1.1. Effect of initial ion concentration on biosorption of Pb onto SC dope, SC UD, SD dope and SD UD.	104
6.5.	Statistical Analysis	105
6.5.1.	Contact time and initial ion concentration	105
6.5.2.	Biosorbent dosage	110
6.5.3.	pH	112
6.6.	To study the adsorption kinetics to understand the variations of uptake of Cd with time	117

6.7.	To study the adsorption kinetics to understand the variations of uptake of Pb ions with time	122
6.8.	To examine the equilibrium between adsorbate concentration in the liquid phase and that on the adsorbent surface at a constant temperature using different adsorption isotherm models	127
6.8.1.	Langmuir model for Cadmium biosorption onto PANi Sugarcane bagasse (doped), PANi sugar cane bagasse(undoped), PANi saw dust(doped) and PANi saw dust (undoped).	127
6.8.2.	Freundlich model for Cadmium biosorption onto PANi Sugarcane bagasse (doped), PANi sugar cane bagasse(undoped), PANi saw dust(doped) and PANi saw dust (undoped).	129
6.8.3.	Langmuir isotherm model for lead onto PANi Sugarcane bagasse (doped), PANi sugar cane bagasse(undoped), PANi saw dust(doped) and PANi saw dust (undoped).	131
6.8.4.	Freundlich isotherm model for lead onto PANi Sugarcane bagasse (doped), PANi sugar cane bagasse(undoped), PANi saw dust(doped) and PANi saw dust (undoped).	133
6.9.	Effect of Cd onto desorption of PANi dope SC, PANi UD SC, PANi dope SD and PANi UD SD.	135
6.10.	Effect of Pb onto regeneration of PANi dope SC, PANi UD SC, PANi SD dope SD and PANi UD SD.	136
	References	138
CHAPTER 7		
Conclusion		
7.1.	Conclusion	139
7.2.	Limitations & Future scope	141
