

*Dedicated to my most beloved,
Maa and Papa,
The strengths of my soul and the wings of my dreams.*

TEZPUR UNIVERSITY
(A Central University Established by an Act of Parliament)
Napaam, Tezpur-784028, Sonitpur, Assam, India

DECLARATION

I solemnly declare that the thesis entitled '**Study of the Electrochemical Behaviour of Creatinine towards Selected Transition Metal Ions and Electro-Active Materials for Sensor Application**,' submitted to the Department of Chemical Sciences, under the School of Sciences, Tezpur University, India, is an authentic record of original research undertaken by me. Following the standard scientific reporting protocols, due acknowledgements have been made wherever the work described is based on the findings of other investigators. I have also acknowledged all sources of support and assistance. Neither this work as a whole nor any part of it has been submitted to any other University or Institute for any degree, diploma or award.

Date: 20-03-2025

Place: Tezpur University, Tezpur.

(Nayab Hussain)

CERTIFICATE FROM THE SUPERVISOR

This is to certify that the thesis entitled “**Study of the Electrochemical Behaviour of Creatinine towards Selected Transition Metal Ions and Electro-Active Materials for Sensor Application**” submitted to Tezpur University, in the Department of Chemical Sciences, under the School of Sciences, in partial fulfillment for the award of the degree of Doctor of Philosophy in Science is a record of research work carried out by **Mr. Nayab Hussain** under my supervision and guidance.

All help and assistance received by him from various sources have been duly acknowledged. No part of this thesis has been reproduced elsewhere for any award or other degree.

Date: 20.03-2025

Place: Tezpur University

CERTIFICATE FROM THE EXTERNAL EXAMINER AND ODEC

This is to certify that the thesis entitled “**Study of the Electrochemical Behaviour of Creatinine towards Selected Transition Metal Ions and Electro-Active Materials for Sensor Application**” submitted to Tezpur University, in the Department of Chemical Sciences, under the School of Sciences, in partial fulfillment for the award of the degree of Doctor of Philosophy in Science has been examined by us on and found to be satisfactory.

The committee recommends the award of the degree of Doctor of Philosophy to Mr. Nayab Hussain.

Acknowledgements

“Setback, despair, lesson, success, joy and growth” – these are what we can randomly find as we embark on any journey and I believe, I found all of those in this PhD journey of mine. However, wearing a smile at the end wouldn’t have been possible without the significant contributions from many that my endeavour has received in different forms. Let me take this opportunity to count the blessings and express my sincere thanks.

First and foremost, I would like to thank the Almighty for blessing me with enthusiasm, patience, and resilience whenever the challenges seemed insurmountable. He has shed light on my path and protected me from stumbling into untold pitfalls. The Almighty has been kind.

This academic voyage was expertly steered by Prof. Panchanan Puzari, my esteemed supervisor and the current Head of the Department of Chemical Sciences, Tezpur University. I want to extend my heartfelt gratitude to him, for not just accepting me in his laboratory and providing me with the opportunity to work under his supervision, but also for being a person from whom one can draw inspiration to have an honest approach towards work and life, with a sense of utmost responsibility. I shall always be grateful to him for his trust in me. His guidance, support, and encouragement during this crucial phase of mine have been unwavering. His caring and compassionate nature has greatly eased my journey. I feel fortunate that he has consistently made himself approachable, offering a reassuring presence in times of uncertainty. Furthermore, he has treated me like a family, illuminating my heart with an amazing feeling that can never be erased.

I wish to offer my profound respect to Prof. Tarun K. Maji and Prof. Ashim J. Thakur, the members of my Doctoral Committee, for their valuable pieces of advice and suggestions. I also thank Prof. Ruli Bora, the former Head of the Department, for providing me with all the necessary support and departmental facilities.

My warmest regards go out to the current and former Vice-Chancellors of Tezpur University, for their efforts in maintaining an amiable environment inside the university campus and providing us with good infrastructure.

It was a privilege to do some collaborative work during my PhD tenure, and I was bestowed with some great learning experiences. Hence, I am thankful to all my

collaborators: Dr. Pankaj Bharali and Dr. Bhugendra Chutia from the Department of Chemical Sciences, Tezpur University; and Prof. Pritam Deb and Monika Sharma from the Department of Physics, Tezpur University.

I am thankful to ‘Sophisticated Analytical Instrumentation Centre (Tezpur University)’, ‘North East Centre for Biological Sciences and Healthcare Engineering (IIT Guwahati)’ and ‘Central Instruments Facility (IIT Guwahati)’ for providing the instrumentation facilities. My gratitude goes out to the technical staff.

All the teaching and non-teaching staff in the Department of Chemical Sciences, Tezpur University, deserve appreciation for their timely assistance, cooperation and suggestions. I am particularly thankful to Dr. Sanjeev P. Mahanta for always lending an ear whenever approached. I would also like to acknowledge Mr. Biplob Ojha, Mr. Sankur Phukan and Dr. Nipu Dutta for facilitating me with the instruments.

I am thankful to Prof. Amitav Das, IISER Kolkata, for his insightful recommendations to enhance the quality of my work. Dr. Tridib Kr. Goswami and Dr. Ranjit Thakuria, my inspiring teachers from Gauhati University, deserve special acknowledgement as they continue to shape and boost my academic journey with their thoughtful suggestions and words of encouragement. I shall also remain ever grateful to Prof. Dilip Kr. Kakati, my M.Sc. project supervisor at Gauhati University, for his significant influence on my academic trajectory.

The wardens, caretakers, and staff of Saraighat C. V. Raman Men's Hostel deserve recognition for creating a supportive and comfortable living atmosphere.

I acknowledge ‘DST-INSPIRE’ and ‘Research and Innovation Grant, Tezpur University (2021)’ for the financial support, that aided in streamlining my research work.

One of the pleasant highlights of my PhD tenure was sharing the laboratory, some laughter and many delightful memories with Dr. Sudarshan Gogoi, Shyamali Kalita, Ranjit Hazarika, Bhinnasmita P. Borah, Mwina Basumatary, Dr. Gullit Deffo, Mridupavan Dutta, Uddipana Saikia, Gyandeep Saikia and Priti Deka. I would also like to mention Pradyut and Kajal, former M.Sc. project students in our laboratory. I am grateful to them for always being nice and kind to me.

Looking back, I realize how lucky I was to have some old friends in the department when I started my PhD. The new friendships formed during this period have also been

equally precious. The love, care, and support from many seniors and juniors in the department and hostel created unforgettable moments, transforming my journey into a treasured tapestry. I must also give a special shoutout to all my incredible and dearest friends outside the university. Despite geographical distances and professional commitments, they have consistently offered a listening ear and uplifting words. I thank them all from the bottom of my heart. I would have missed out on countless cherished memories without them.

I extend my deepest gratitude to my grandmother, whose presence brings me a sense of calmness and serenity. It's a blessing to have her. I also appreciate the love, support and encouragement from my uncles, aunts and cousins.

A big thanks to all my nieces and nephews as these little ones in my family have been my much-needed sources of joy and rejuvenation. Their smiles and hugs have brightened many gloomy days. A special mention to Tanuja for her presence, prayers and warm wishes, infusing me with immense positivity and bliss during the final leg of my PhD journey and for the journey ahead.

I am grateful to all my well-wishers for their generous sentiments.

Last but not least, I want to thank my parents, Mr. Riajul Hussain and Mrs. Nazrina Begum, but no words would be enough for that. I am forever indebted to them for everything they have been through so that I can live my dreams. Their prayers, care and unconditional love are my greatest strengths. I strive to be a son who can make them proud and I pray to the Almighty that their blessings continue to pave my way forward.

Abbreviations and symbols used in this thesis

%	Percent
$ Z $	Magnitude of electrochemical impedance
°	Degree
°C	Degree Celsius
μA	Microampere
μL	Microlitre
$\mu\text{S/m}$	Microsiemens per meter
2-NBA	2-nitrobenzaldehyde
A	Ampere
A	Electrode surface area
Å	Armstrong
a.u.	Arbitrary unit
ACN	Acetonitrile
AKI	Acute kidney injury
aMRDR	Abbreviated Modification of Diet in Renal Disease
ASN	American Society of Nephrology
B2M	β_2 -microglobulin
BSA	Body surface area
BTP	β -trace protein
BUN	Blood urea nitrogen
BW	Body weight
C/mol	Coloumb per mole
CA	Chronoamperometry
CB	Carbon black
C_c	Coating capacitance
CCS	Cobalt chloride solution
C_{dl}	Double layer capacitance
CE	Counter electrode
CIP	Creatinine imprinted polypyrrole
CIP/Pt	Platinum electrode modified with creatinine imprinted polypyrrole
CKD	Chronic Kidney Disease
CKD-EPI	Kidney Disease Epidemiology Collaboration
CL_{cr}	Creatinine clearance
cm	Centimetre
$\text{cm}^2 \text{s}^{-1}$	Square centimetres per second

CNT	Carbon nanotube
COPD	Chronic obstructive pulmonary disease
CP	Chronopotentiometry
CPE	Constant phase element
CRS	Creatinine solution
CV	Cyclic voltammetry/ Cyclic voltammogram
CVs	Cyclic voltammograms
D	Diffusion coefficient
DMSO	Dimethyl sulfoxide
DPV	Differential pulse voltammetry/ Differential pulse voltammogram
DPVs	Differential pulse voltammograms
DRS	Diffuse Reflectance Spectra
EDX	Energy dispersive X-Ray
eGFR	Estimated Glomerular Filtration Rate
EIS	Electrochemical impedance spectroscopy
E_{onset}	Onset potential
EPR	Electron Paramagnetic Resonance
Eq.	Equation
Et al.	<i>et alli</i>
Etc.	Et Cetera
F	Faraday's Constant
f	Frequency
FTIR	Fourier Transform Infrared Spectroscopy
g/mol	Gram per mole
GCE	Glassy carbon electrode
GEIS	Galvanostatic electrochemical impedance spectroscopy
GFR	Glomerular Filtration Rate
HBS	Human blood serum
Ht	Height
IHD	Ischaemic heart diseases
i_p	Peak current
i_{pa}	Anodic peak current
i_{pc}	Cathodic peak current
IUPAC	International Union of Pure and Applied Chemistry
$\text{J K}^{-1} \text{mol}^{-1}$	Joule per kelvin per mole
KDIGO	Kidney Disease: Improving Global Outcomes
kg	Kilogram

LICs	Low-income countries
LMICs	Lower-middle-income countries
LMWPs	Low Molecular Weight Proteins
LOD	Limit of detection
LOQ	Limit of quantification
LRI	Lower respiratory infections
m	Meter
M	Molar
m ²	Square meter
mg	Milligram
mg/day	Milligrams per day
mg/dL	Milligrams per decilitre
mg/L	Milligrams per litre
mGFR	Measured Glomerular Filtration Rate
MHz	Megahertz
mHz	Millihertz
min	Minute
MIP	Molecular imprinted polymer
mL	Millilitre
mL/min	Millilitres per minute
mM	Millimolar
MRDR	Modification of Diet in Renal Disease
ms	Millisecond
mV	Millivolt
mV s ⁻¹	Millivolt per second
<i>n</i>	Number of electron transfer
NADPH	Nicotinamide adenine dinucleotide phosphate
ng	Nanogram
NIP	Non-imprinted polypyrrole (co-deposited polypyrrole and creatinine)
NIP/Pt	Platinum electrode modified with non-imprinted polypyrrole
NKF	National Kidney Foundation
nm	Nanometer
P _{adj}	Adjusted creatinine production rate
PANi	Polyaniline
PBS	Phosphate buffer saline
PEIS	Potentiostatic electrochemical impedance spectroscopy
pH	Potential of hydrogen

POCT	Point-of-care-testing
PPy	Polypyrrole
P-XRD	Powder X-Ray Diffraction
Py	Pyrrole
R	Gas constant
R_{ct}	Charge transfer resistance
RE	Reference electrode
rGO	Reduced graphene oxide
R_p	Polarization resistance
R_s	Solution resistance
s	Second
SCr	Serum creatinine concentration
SEM	Scanning Electron Microscope
T	Time
T	Temperature
UCr	Urinary creatinine concentration
UV-vis	Ultraviolet-visible
V	Volt
$V\ s^{-1}$	Volt per second
V_U	24-hours urine volume
WE	Working electrode
YLLs	Years of life lost
Z	Electrochemical impedance
Z_w	Warburg resistance
σ	Warburg coefficient
φ	Phase difference
ω	Radial frequency

Chapter	Figure No.	Figure Caption	Page No.
1	1.1	Tautomeric forms of creatinine.	1.18
1	1.2	Illustration of the detection principles of different methods for non-enzymatic electrochemical determination of creatinine.	1.19
2	2.1	A) A potential-time waveform obtained during the CV run, and B) a typical cyclic voltammogram with one redox couple.	2.5
2	2.2	A) A potential-time waveform obtained during the DPV run, and B) a typical differential pulse voltammogram.	2.8
2	2.3	A) A potential-time waveform obtained during the CA run, and B) a typical CA graph.	2.9
2	2.4	Nyquist and Bode plot for Randles circuit.	2.13
3	3.1	A) DPVs obtained for (a) blank solution (PBS/2-NBA/NaOH), (b) test solution (CRS/2-NBA/ NaOH) containing 25 mM creatinine in the added CRS and (c) 25 mM creatinine solution (CRS) B) a*, b* and c* are their respective cyclic voltammograms.	3.6
3	3.2	A) CVs obtained for test solutions with the scan rate a) 25 mV/s, b) 50 mV/s, c) 75 mV/s, d) 100 mV/s, e) 150 mV/s and f) 200 mV/s. B) Plot of the anodic peak current (i_{aP}) and the cathodic peak current (i_{cU}) against the square root of the scan rate ($v^{1/2}$).	3.7

3	3.3	A) DPVs obtained for test solutions with the concentration (w/v) of the added 2-NBA solution being a) 2 %, b) 5 %, c) 7 %, d) 10 %, e) 12 % and f) 15 %. B) Plot of average oxidative peak currents (P and Q) obtained for test solutions against different concentrations of 2-NBA.	3.9
3	3.4	DPVs obtained for test solutions when the pH of the buffer was (a) 4.6, (b) 5.0, (c) 5.4, (d) 5.8, (e) 6.2, (f) 6.6, (g) 7.0, (h) 7.4, (i) 7.8 and (j) 8.0.	3.9
3	3.5	A) Plot of average oxidative peak current of peak P (curve a) and average oxidative peak current of peak Q (curve c) for test solutions; plot of average baseline current for P (curve b) and average initial blank oxidation peak current for Q (curve d) for blank solutions, against the pH of the buffer. B) Plot of the current difference in the DPVs of the test and the blank solutions with reference to peak P (curve x) and peak Q (curve y) at different pH, after 600 s of reaction time.	3.10
3	3.6	Time variation of the oxidative current of peak P in test solutions when the pH of the buffer was (a) 6.6 and (b) 7.4.	3.11
3	3.7	A) DPVs obtained for (a) blank solution and (b–l) test solutions containing different CRS concentrations. B) Calibration curve obtained by plotting average oxidative peak currents (n = 3) of P against the concentrations of creatinine.	3.12
3	3.8	DPVs obtained for test solutions in the presence of (a) no interference, (b) dopamine (0.003 mM), (c) ascorbic acid (0.3 mM), (d) glucose (0.8 mM), (e) urea (250 mM) and (f) uric acid (0.3 mM). (Inset: Enlarged view of the oxidation peak P).	3.14

3	3.9	DPVs obtained for (a) raw urine sample and urine samples spiked with (b) 1 mM, (c) 2.5 mM and (d) 5 mM of creatinine, after the addition of NaOH and 2-NBA solution.	3.17
3	3.10	A) DPVs obtained for (a) PBS, (b) CRS, (c) PBS/NaOH, (d) CRS/NaOH, (e) PBS/2-NBA, (f) CRS/2-NBA, (g) PBS/2-NBA/NaOH (blank solution) and (h) CRS/2-NBA/NaOH (test solution). B) a*–h* are their respective cyclic voltammograms.	3.18
3	3.11	FTIR spectrum obtained for a) ethanolic solution of 2-NBA, b) 2-NBA/NaOH, c) ethanol, d) solvent (ethanol spectrum) removed spectrum ‘a’, and e) solvent (ethanol spectrum) removed from spectrum ‘b’.	3.23
3	3.12	FTIR spectrum obtained for a) test solution (CRS/2-NBA/NaOH), b) blank solution (PBS/2-NBA/NaOH), and c) PBS.	3-24
3	3.13	FTIR spectrum obtained for A) test solution, and B) blank solution, after subtracting the spectra of solvents.	3.24
4	4.1	Illustration of the processes involved in the synthesis of cobalt complexes.	4.5
4	4.2	SEM image (at X500) of a) creatinine, b) CoCl ₂ (anhydrous), c) 2-nitrobenzaldehyde, d) C1, e) C2 and f) C3.	4.7
4	4.3	SEM images (at X1000) of a) C1, b) C2 and c) C3.	4.8
4	4.4	P-XRD patterns obtained for a) creatinine, b) CoCl ₂ ·6H ₂ O, c) 2-nitrobenzaldehyde, d) C1, e) C2 and f) C3.	4.9

4	4.5	FTIR spectra of a) creatinine, b) $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, c) 2-nitrobenzaldehyde, d) C1, e) C2 and f) C3 in the complete frequency range of $4000\text{--}350\text{ cm}^{-1}$ (A) and in the expanded lower frequency range of $1800\text{--}500\text{ cm}^{-1}$ (B).	4.12
4	4.6	FTIR spectra of a) creatinine, b) $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, c) 2-nitrobenzaldehyde, d) C1, e) C2 and f) C3 in the expanded lower frequency range of $500\text{--}350\text{ cm}^{-1}$.	4.14
4	4.7	Raman spectra obtained for a) C1, b) C2 and c) C3. Inset-A: Raman spectra obtained for d) creatinine, e) 2-nitrobenzaldehyde and f) $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$.	4.15
4	4.8	UV-visible DRS obtained for a) creatinine, b) $\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$, c) 2-nitrobenzaldehyde, d) C1, e) C3 (Inset- A: Enlarged view of the d-d transitions occurring in 'b', 'd' and 'e').	4.17
4	4.9	EDX spectra obtained for a) C1 and b) C3.	4.19
4	4.10	A) CVs and B) DPVs obtained for aqueous solutions of a) cobalt chloride b) $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})]\text{Cl}_2$ and c) $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})_2(2\text{-NBA})]\text{Cl}_3$.	4.21
4	4.11	EPR spectra obtained for a) $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})]\text{Cl}_2$, and b) $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})_2(2\text{-NBA})]\text{Cl}_3$. [Inset- A: Enlarged EPR spectra of 'a' and 'b' in the magnetic field range of $577\text{--}677\text{ mT}$].	4.24
4	4.12	A) Pink-coloured aqueous solution of $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})]\text{Cl}_2$, B) brown-coloured aqueous solution of $[\text{Co}(\text{CR})_3(\text{H}_2\text{O})_2(2\text{-NBA})]\text{Cl}_3$, and C) white precipitate obtained on adding	4.25

drops of AgNO₃ solution to aqueous solution of the cobalt complex.

5	5.1	Illustration of the process to obtain deproteinized serum.	5.5
5	5.2	DPVs obtained for a) blank solution (PBS/2-NBA/CCS) and b) test solution (CRS/2-NBA/CCS).	5.6
5	5.3	DPVs obtained for test solutions after different reaction times ('Inset- A' shows the enlarged view of peak <i>X</i> . 'Inset- B' represents the plot of peak <i>X</i> intensity v/s reaction time).	5.7
5	5.4	DPVs obtained for test solutions having different CCS concentrations. ('Inset- A' shows an enlarged view of peak <i>X</i> . 'Inset- B' represents the plot of peak <i>X</i> intensity v/s CCS concentration).	5.8
5	5.5	DPVs obtained for test solutions having different 2-NBA concentration. ('Inset- A' shows an enlarged view of peak <i>X</i> . 'Inset- B' represents the plot of peak <i>X</i> intensity v/s 2-NBA concentration).	5.9
5	5.6	A) DPVs obtained for a) blank solution and (b-j) test solutions containing different CRS concentrations ('Inset' shows an enlarged view of the peaks <i>V</i> , <i>W</i> , <i>X</i> , and <i>Y</i> , for all the voltammograms). B) Calibration curve generated by plotting average peak currents of peak <i>X</i> against the different CRS concentrations.	5.10
5	5.7	DPVs obtained for test solutions in the presence of a) no interference, b) 8 mg/dL uric acid, c) 150 μM ascorbic acid, d) 150 mg/dL glucose, e) 7 mM urea, and f) 5 g/dL albumin	5.12

(‘Inset’ shows an enlarged view of the peak *X* in the voltammograms).

5	5.8	A bar diagram illustrating the average intensities of <i>X</i> with relative standard deviations, for test solutions in the absence and presence of varying concentrations of interfering components, and the interference percentage in each case.	5.13
5	5.9	DPVs obtained for a) Albumin spiked 'CRS/2-NBA/CCS', b) Raw HBS + 2-NBA solution + CCS, c) ACN mixed 'CRS/2-NBA/CCS', d) 'ACN mixed deproteinized HBS' + 2-NBA solution + CCS, and e) 'ACN removed deproteinized HBS' + 2-NBA solution + CCS.	5.14
5	5.10	DPVs obtained for the deproteinized HBS spiked with a) 0, b) 0.1 mM, c) 0.2 mM and d) 0.5 mM creatinine, after adding CCS and 2-NBA solution.	5.15
5	5.11	DPVs obtained for a) PBS, b) CRS, c) PBS/2-NBA, d) CRS/2-NBA, e) PBS/CCS, f) CRS/CCS, g) blank solution (PBS/2-NBA/CCS), and h) test solution (CRS/2-NBA/CCS).	5.18
5	5.12	UV-visible spectra obtained for a) CRS, b) PBS/CCS, c) CRS/CCS, d) PBS/2-NBA, e) CRS/2-NBA, f) blank solution (PBS/2-NBA/CCS), and g) test solution (CRS/2-NBA/CCS).	5.22
6	6.1	1 st cycle (A) and 11 th cycle (B) of the CV recorded for copper sulphate solution with the initial forward potential sweep applied from a) 0.8 V to −0.8 V and b) −0.8 V to 0.8 V.	6.8

6	6.2	Variations of peak potential (A) and intensity (B) of Ox_1 and Ox_2 in cycles with opposite forward potential sweep directions.	6.9
6	6.3	PEIS response recorded for copper sulphate solution with the applied DC voltage being a) 0 V, b) 0.05 V, c) 0.10 V, d) 0.15 V, e) 0.20 V and f) 0.25 V. 'Inset-A' shows the enlarged impedance spectra for the solutions at higher frequency region and 'Inset-B' shows the equivalent circuit model.	6.11
6	6.4	Stable CVs (same cycle) obtained for copper sulphate solution spiked with a) 0 mM, b) 2 mM, c) 4 mM, d) 5 mM and e) 10 mM creatinine. 'Inset' shows the plot of percentage inhibition (%) of Ox_1 intensity against the creatinine concentration (mM).	6.12
6	6.5	UV-vis spectra of: A) PBS solution containing (a) 0.1 mM copper sulphate, (b) 0.1 mM creatinine, and (c) isomolar copper sulphate and creatinine; B) 1:1 acetonitrile-water solution containing (a) 5 mM cuprous iodide, (b) 5 mM creatinine, and (c) isomolar cuprous iodide and creatinine; and C) isomolar cuprous iodide-creatinine solution recorded at a time interval of 4 minutes unto 84 minutes. 'D' and 'E' show the colour change on adding creatinine in solutions containing Cu^{2+} and Cu^{1+} ions respectively.	6.14
6	6.6	A) CA response of acidic copper sulphate solution at the constant potential of -0.2 V. B) Pt electrode surface modified with reddish-brown deposition of Cu^0 .	6.16
6	6.7	CV (A) and DPV (B) obtained for a) PBS and b) CRS with Cu^0 /Pt electrode.	6.17

6	6.8	Successive DPV runs with Cu ⁰ /Pt electrode in (A) PBS (a–g) and (B) CRS (a-d).	6.18
6	6.9	CP responses of 0.1 M KNO ₃ solution containing a) 100 mM pyrrole monomer with 30 mM creatinine, and b) 100 mM pyrrole monomer.	6.20
6	6.10	UV-vis spectra (A) and FTIR spectra (B) of 0.1 M KNO ₃ solution containing a) 10 mM pyrrole monomer, b) 3 mM creatinine and c) 10 mM pyrrole monomer with 3 mM creatinine.	6.21
6	6.11	SEM images of a) polypyrrole film, b) co-deposited creatinine and polypyrrole film, and c) creatinine-imprinted polypyrrole film. ‘d’, ‘e’ and ‘f’ are the respective SEM images at higher magnification.	6.24
6	6.12	GCVs recorded for copper sulphate solution with a) TIP/Pt and b) CIP/Pt electrode.	6.25
6	6.13	A) GEIS responses recorded in PBS (a) and in different concentrations of CRS (b–h) with CIP/Pt electrode. B) Variation of solution resistance (a) and Warburg coefficient (b) with creatinine concentration. The inset in ‘A’ shows the equivalent circuit model.	6.25

4	4.1	Structural representation of the coordination sphere of A) creatinine-cobalt complex, and B) creatinine-cobalt-2-NBA complex, having isomeric forms of creatinine.	4.20
5	5.1	Electrochemical redox processes occurring in the reaction between cobalt ions, creatinine, and 2-nitrobenzaldehyde.	5.21
6	6.1	A) Redox processes occurring in the copper sulphate solution, and B) Inhibition of the redox processes in the presence of creatinine.	6.13
