Abstract	i
Declaration	vi
Certificate from the Supervisor	vii
Certificate from the Co-Supervisor	viii
Certificate from the external examiner and ODEC	ix
Preface	x
Acknowledgements	xi
Abbreviations and symbols used	xiv
List of Figures	xvii
List of Tables	xxii
List of Schemes	xxiii
Chapter 1: A general introduction to hydrogel, its properties, and applications in various fields	
1.1 Introduction	1.1
1.2 Classification of hydrogel	1.3
1.2.1 Classification based on origin	1.4
1.2.2 Classification based on response to external stimuli	1.5
1.3 Synthesis of hydrogel	1.9
1.3.1 Crosslinked through chemical reactions	1.9
1.3.2 Crosslinked via various physical cross-linking	1.9
1.4 Properties of hydrogel	1.10
1.4.1 Swelling properties	1.10
1.4.2 Mechanical properties	1.11
1.4.3 Biocompatibility	1.11
1.4.4 Porosity	1.12
1.4.5 Self-healing property	1.12
1.5 Hydrogel as an adhesive material	1.12
1.5.1 Application of adhesive hydrogel	1.14

1.6	Hydrogel as a photocatalyst	1.17
1.6.1	Application of Photocatalytic Hydrogel	1.18
1.7	Hydrogel as an electroactive material	1.19
1.7.1	Application of electroactive hydrogels	1.20
1.8	Characterization of hydrogel	1.22
1.8.1	Structural characterization	1.22
1.8.2	Morphology	1.22
1.8.3	Thermal properties	1.22
1.8.4	Swelling Behavior	1.23
1.8.5	Mechanical properties	1.23
1.8.6	Biocompatibility and biodegradability	1.24
1.9	Objectives	1.24
1.10	Plan of research work	1.25
	References	1.27

Chapter 2: Development of mussel mimetic gelatin-based adhesive hydrogel for wet surfaces with self-healing and reversible properties

2.1	Introduction	2.1
2.2	Experimental section	2.3
2.2.1	Materials	2.3
2.2.2	Synthetic procedures	2.3
2.3	Characterization	2.4
2.3.1	Fourier Transform Infrared Spectroscopy (FTIR)	2.4
2.3.2	Powder X-ray Diffractometry (XRD)	2.4
2.3.3	Scanning Electron Microscopy (SEM)	2.4
2.3.4	Thermogravimetric Analysis (TGA)	2.5
2.3.5	X-ray Photoelectron Spectroscopy (XPS)	2.5
2.3.6	Optical Microscopic Images	2.5
2.3.7	Determination of equilibrium swelling	2.5
2.3.8	In vitro Hemocompatibility Study	2.5
2.3.9	Mechanical Tests	2.6
2.3.10	Adhesion test	2.6
2.3.11	Self-healing experiment	2.6
2.4	Results and Discussion	2.7
2.4.1	Design strategy for the synthesis of hydrogel	2.7
2.4.2	FTIR analysis	2.8
2.4.3	XRD	2.10

2.4.4	Thermal Degradation Study	2.11
2.4.5	SEM	2.12
2.4.6	XPS study	2.12
2.4.7	Tensile Test	2.14
2.4.8	Adhesion study	2.14
2.4.9	Self-healing property	2.17
2.4.10	Swelling	2.18
2.4.11	Blood Compatibility Study	2.18
2.5	Conclusion	2.19
	References	2.19

Chapter 3: Mussel-inspired adhesive hydrogel patch for wet surfaces with self-healing and pH-dependent drug delivery for potential transdermal applications

3.1	Introduction	3.1
3.2	Experimental section	3.2
3.2.1	Materials	3.2
3.2.2	Synthetic procedures	3.3
3.3	Characterization	3.4
3.3.1	Structural characterization	3.4
3.3.2	Swelling behavior	3.4
3.3.3	Mechanical strength	3.4
3.3.4	Adhesive test	3.4
3.3.5	Self-healing experiment	3.5
3.3.6	In-vitro degradation studies	3.5
3.3.7	In-vitro cytotoxicity evaluation	3.5
3.3.8	Drug loading and release study	3.6
3.4	Results and Discussion	3.7
3.4.1	Synthesis of hydrogel	3.7
3.4.2	FTIR analysis	3.9
3.4.3	SEM	3.10
3.4.4	Thermal Degradation Study and XRD analysis	3.10
3.4.5	Swelling behavior	3.11
3.4.6	Tensile strength	3.12
3.4.7	Self-healing	3.15
3.4.8	Adhesion	3.16
3.4.9	In vitro-hemocompatibility and degradation	3.18
3.4.10	Determination of cell biocompatibility	3.20
3.4.11	Drug adsorption and release study	3.21
3.5	Conclusion	3.23
	References	3.23

Chapter 4: Robust and highly compressible polyacrylamide co-polymer hydrogel developed through g-C₃N₄ initiated photopolymerisation and its photocatalytic activity towards dye removal

4.1	Introduction	4.1
4.2	Experimental sections	4.4
4.2.1	Materials	4.4
4.2.2	Synthetic procedures	4.4
4.3	Characterization	4.5
4.3.1	Structural characterization	4.5
4.3.2	Transmission Electron Microscopy (TEM)	4.5
4.3.3	UV-visible spectroscopy	4.5
4.3.4	CHN and Photoluminescence (PL) analysis	4.6
4.3.5	Determination of equilibrium swelling of the hydrogel	4.6
4.3.6	Photocatalytic activity study	4.6
4.3.7	Selective behaviour to dyes	4.7
4.3.8	Recyclability study	4.7
4.3.9	Adsorption property study	4.7
4.4	Results and Discussion	4.8
4.4.1	Fabrication and characterization of photoactive hydrogel	4.8
4.4.2	FTIR analysis	4.9
4.4.3	X-ray diffraction analysis (XRD)	4.11
4.4.4	SEM and TEM analysis	4.11
4.4.5	UV-Vis spectroscopy	4.12
4.4.6	CHN analysis	4.13
4.4.7	PL spectroscopy	4.14
4.4.8	TGA analysis	4.14
4.4.9	Swelling behaviour	4.15
4.4.10	Compressibility	4.16
4.4.11	Removal of organic dye by the synergistic effect of adsorption and photocatalytic degradation	4.18
4.4.12	Recyclability	4.25
4.4.13	Adsorption property of the hydrogel towards the dye	4.26
4.5	Conclusion	4.31
	References	4.32

Chapter 5: Design of Starch-Based Electro-Responsive Smart Hydrogel with Rapid Bending Actuation Under Low-Electric Field

5.1	Introduction	5.1
------------	---------------------	------------

5.2	Experimental Section	5.3
5.2.1	Materials	5.3
5.2.2	Synthetic procedures	5.3
5.3	Characterization	5.4
5.3.1	Determination of swelling behavior of the hydrogel	5.4
5.3.2	Mechanical Tests	5.5
5.3.3	Bending actuation under electric field	5.5
5.4	Results and Discussion	5.6
5.4.1	Fabrication strategy of the hydrogel	5.6
5.4.2	Characterization of the hydrogel by FTIR spectral analysis	5.8
5.4.3	Morphological and elemental analysis of the hydrogel	5.9
5.4.4	Thermal study of the hydrogel using TGA	5.10
5.4.5	Swelling behavior of the hydrogel	5.11
5.4.6	Mechanical strength	5.13
5.5	Bending of hydrogel under low electric voltages	5.15
5.5.1	Effect of ionic strength	5.16
5.5.2	Effect of electric field	5.17
5.5.3	Effect of thickness	5.17
5.5.4	Cyclic bending actuation	5.18
5.6	Conclusion	5.18
	References	5.19

Chapter 6: Conclusion and Future

6.1	Conclusion	6.1
6.2	Future scope	6.4
