

TABLE OF CONTENTS

CONTENTS	Page No.
Acknowledgement	i-ii
Abstract	iii-vi
Table of Contents	vii-xiii
List of Tables	xiv-xv
List of Figures	xvi-xviii
List of Abbreviations	xix-xx
List of Symbols	xxi-xxiv
CHAPTER 1: INTRODUCTION	1-34
1.1 Importance of energy	1-4
1.2 Renewable energy: a global and Indian perspective	4-9
1.2.1 Status of renewable energy in Assam	9
1.2.2 Renewable purchase obligation (RPO) targets	9-10
1.3 Solar energy in global and Indian perspective	10-12
1.3.1 Status of solar energy installations in Assam	12-13
1.3.2 Key drivers for desired growth of solar energy in Assam	13
1.3.3 Solar energy supportive policies and programs	13-14
1.4 Solar photovoltaic systems: Types and applications	15-16
1.4.1 Rooftop solar (RTS) systems	17
1.4.2 Ground-mounted solar (GMS) systems	17
1.4.3 Solar photovoltaic water pumping (SWP) systems	18
1.5 Integration with electric vehicles (EVs) and infrastructure	18-19
1.6 Motivation and research gap	19-21
1.7 Problem statement and description	21-22
1.8 Objectives of the research	22-23
1.9 Organization of the Thesis	23-26
References	27-34
CHAPTER 2: REVIEW OF LITERATURE	35-55
2.1 Introduction	35
2.2 Solar photovoltaic energy systems	35

2.2.1	Overview of solar PV technology	35-36
2.2.2	Applications of solar PV in energy systems	36-38
2.3	Tools for solar energy assessment	38
2.3.1	Mathematical modelling techniques for solar PV systems	38
2.3.2	Geographic information system (GIS) for solar energy planning	38-39
2.3.3	PVLib Python for solar performance modelling	39-40
2.3.4	Decentralized energy planning and geospatial modelling	40-41
2.4	Greenhouse gas (GHG) emissions and lifecycle assessment	41
2.4.1	GHG emission reduction through solar PV	41-42
2.4.2	Lifecycle GHG Assessment of Solar PV Systems	42-43
2.5	Barriers and enablers for large-scale deployment of solar PV	43-44
2.6	Economic analysis and business models for solar PV systems	44
2.6.1	Techno-economic assessment of solar PV systems	44
2.6.2	Business models for solar PV deployment	45-46
2.7	Summary and identification of research gaps	46
2.7.1	Identified research gaps	46-47
	References	48-55
CHAPTER 3: ASSESSMENT OF SOLAR PHOTOVOLTAIC POTENTIAL IN RURAL ASSAM		56-146
3.1	Introduction	56-57
PART A: SPATIAL AND TEMPORAL ASSESSMENT OF SOLAR PHOTOVOLTAIC POTENTIAL		58-126
3.2	Conceptualization of the physical framework	58
3.2.1	Energy potential of solar PV systems: description of physical framework	58-59
3.2.2	Key parameters for the assessment of solar PV energy potential	59
3.3	Development of the spatial-temporal model for solar PV potential assessment	59-60
3.3.1	Considerations for spatial variations	60
3.3.2	Considerations for temporal variations	60-61
3.3.3	Theoretical solar PV energy potential: assessment at spatial and temporal scales	61-62
3.3.4	Achievable solar PV energy potential	62-64

3.4	Application of the spatial-temporal model framework for solar PV energy assessment	64-65
3.4.1	Selection of study area	65-68
3.4.2	Selection of solar PV system types	68
3.4.3	Assessment and mapping of available space for solar pv installation	69-70
3.4.4	Application of geospatial tools	70-72
3.4.4.1	RTS potential assessment	72-74
3.4.4.2	GMS potential assessment	74
3.4.4.3	SWP potential assessment	74-76
3.4.4.4	Combined solar potential assessment	76
3.4.5	Simulation of pv energy potential using PVlib-python	76-77
3.4.6	Methodology for simulation	77-80
3.4.7	Estimation of per capita energy availability (PCEA)	80-81
3.5	Data sources	81-82
3.5.1	Remote sensing and GIS data	82-86
3.5.2	Solar insolation data	86-91
3.5.3	Temperature data	92-93
3.5.4	Wind speed data	93-95
3.6	Results and discussions	95
3.6.1	Assessment of available area for solar PV installation	95-104
3.6.2	Assessment of solar PV system potential	104-106
3.6.2.1	RTS: installation and generation capacity	106-108
3.6.2.2	GMS: installation and generation capacity	108-111
3.6.2.3	SWP: installation and generation capacity	111-113
3.6.3	Temporal variations in generation capacity: system-wise assessment	113-116
3.6.3.1	Implications of diurnal and seasonal variability in solar PV generation	116-117
3.6.3.2	Energy planning and management implications	117-118
3.6.4	Estimation of per capita energy availability (PCEA)	118
3.6.5	Surplus energy from SWP and planning for EV charging infrastructure	118-120
3.6.6	Key assumptions and limitations	120-121
3.6.7	Summary	121-122

	References	123-126
PART B:	LIFECYCLE GHG EMISSION ESTIMATION	127-146
3.7	Introduction	127
3.8	Framework for lifecycle GHG emission estimation	127-128
3.8.1	Goal and scope definition	128
3.8.2	System boundary selection	128-129
3.9	Methodology for lifecycle GHG emission estimation	129
3.9.1	Emission calculations for each phase	129
3.9.1.1	Manufacturing phase	129-130
3.9.1.2	Transportation phase	130
3.9.1.3	Installation phase	130-131
3.9.1.4	Operation and maintenance phase	131
3.9.1.5	End-of-life phase	131-133
3.9.2	Total lifecycle GHG emissions for each system	133-134
3.10	GHG emission reductions estimation	134
3.10.1	GHG emission reductions for each system	134
3.10.1.1	GHG emission reductions for RTS and GMS	134-135
3.10.1.2	GHG emission reductions for SWP	135
3.10.2	Total GHG emission reductions	135-136
3.10.3	Net GHG emission reductions	136
3.11	Data sources, assumptions and limitations	136
3.11.1	Data sources	136-139
3.11.2	Assumptions	139
3.11.3	Limitations	139-140
3.12	Results and Discussions	140
3.12.1	Lifecycle GHG emissions by stages	140
3.12.2	Interpretation	140-142
3.13	Summary	142
	References	143-146
CHAPTER 4:	ASSESSMENT OF SWP SYSTEM WITH INTEGRATION OF EV CHARGING	147-189
4.1	Introduction	147

4.1.1	Background	147
4.1.2	Agricultural landscape	147-150
4.2	Material and Methods	150-151
4.2.1	Selection of study area	151-152
4.2.2	Crop data considered for the analysis	152
4.2.3	Method of irrigation and water requirement	153-154
4.2.4	Groundwater availability	154
4.2.5	Pump selection	154-155
4.2.6	Solar radiation data	155-156
4.2.7	Costs calculation and assumptions	156-157
4.2.8	Estimation of CO ₂ emission	157-158
4.2.9	Revenue calculation	158
4.2.9.1	Revenue from crops	158
4.2.9.2	Revenue from PV unit	159
4.2.9.3	Revenue from carbon trading	159
4.2.10	Economic analysis	159
4.2.10.1	Net present value	159-160
4.2.10.2	Payback period (PBP)	160
4.2.10.3	Ranking of pumping options	160
4.2.10.4	Sensitivity analysis	161
4.3	Results and Discussion	161
4.3.1	Irrigation water requirement	161
4.3.2	Pump selection	161-162
4.3.3	Cost of irrigation	162
4.3.3.1	SWP with subsidy	162
4.3.3.2	SWP without subsidy	162-163
4.3.4	Estimated CO ₂ emission	163
4.3.5	Revenue calculated	164
4.3.5.1	Revenue from crops	164
4.3.5.2	Revenue from PV unit	164
4.3.5.3	Revenue from carbon trading	164-165
4.3.5.4	Total revenue	165

4.3.6	Economic analysis	165
4.3.6.1	Net present value	165-166
4.3.6.2	Payback period	166-167
4.3.6.3	Ranking based on annual cost of irrigation (<i>CoI</i>) by annual net cash flow (<i>Rt</i>)	167
4.3.7	Sensitivity analysis	167-168
4.3.8	Variation of discharge with radiation	169-170
4.3.9	Solar irrigation-based microgrid	170
4.4	Feasibility analysis for electric vehicle charging	171
4.4.1	Load modelling for EV charging	171-172
4.4.2	EV charging infrastructure development	172-173
4.4.3	Smart grid integration	173-174
4.4.4	EV Specifications and charging requirements	174-175
4.4.5	Energy utilization efficiency	175
4.4.6	Potential of EV Charging	175-176
4.4.7	Optimized energy management strategies	176
4.4.8	Energy management algorithm	177-178
4.5	Summary of findings	178
4.5.1	Summary	178-179
4.5.2	Policy implications	180-181
	References	182-189
CHAPTER 5: BARRIERS, ENABLERS, AND BUSINESS MODELS FOR SCALING SOLAR PHOTOVOLTAIC ENERGY SYSTEMS		190-235
5.1	Introduction	190
5.2	Barriers to scaling solar PV energy systems	191
5.2.1	Technical barriers	191-193
5.2.2	Financial and economic barriers	193-194
5.2.3	Policy and regulatory barriers	194-195
5.2.4	Social and awareness barriers	195-196
5.3	Enablers for scaling solar PV energy systems	196
5.3.1	Technological enablers	196-198

5.3.2	Financial enablers	198-199
5.3.3	Policy and regulatory enablers	199-200
5.3.4	Social and community enablers	200-201
5.4	Business models for scaling solar PV energy systems	201-203
5.4.1	Overview of RTS business model	203-204
5.4.2	Business model	204-211
5.4.3	Case study analysis for RTS consumer	212-213
5.4.4	Economic analysis of RTS systems	213-217
5.4.5	Overview of GMS business model	217-218
5.4.5.1	Financial feasibility and implementation strategy	219
5.4.5.2	Business model for GMS	219-222
5.4.5.3	Sensitivity analysis	222-224
5.5	Summary	224-226
	References	227-235
CHAPTER 6: SUMMARY AND CONCLUSIONS		236-247
6.1	Assessment of solar photovoltaic potential in rural Assam	236-238
6.2	Assessment of SWP system with integration of EV charging	238-241
6.3	Barriers, enablers, and business models for scaling solar photovoltaic energy systems	241-242
6.4	Major findings of the research	242-243
6.5	Significant contributions to literature and practice	243-244
6.6	Recommendations to stakeholders (policy makers, practitioners, and consumers)	244-245
6.7	Limitations of present work	245-246
6.8	Conclusion and suggestions for future work	246-247
APPENDICES		
Appendix 3A	Irrigation methods and water requirements for various crops	248
Appendix 3B	Demographics and socioeconomic profile of Villages in the study area	249-250
Appendix 3C	Python script to simulate the performance of a PV system using pvlib-python	251-256
Appendix 3D	Survey form	257-264
Appendix 3E	Spatial map of monthly PVS output	265-270

Appendix 4A	Groundwater prospect map	271
Appendix 4B	Details of groundwater with legends and sources	272
Appendix 4C	Details of irrigation scheduling for the crops considered	273
List of Publications		274
