Abstract **i**

List of Tables **xv**

List of Figures **xvii**

1 Introduction **1**

1.1 Background of Software-Defined Networking (SDN) 1

1.2 SDN Architecture 2

1.2.1 Application Layer 3

1.2.2 Control Layer 3

1.2.3 Forwarding (Infrastructure) Layer 4

1.3 OpenFlow Protocol 4

1.4 Multi-Controller Architecture 5

1.5 Security Challenges 6

1.6 Blockchain Technology 7

1.6.1 Blockchain Consensus 9

1.6.2 Ethereum Smart Contracts 9

1.7 Motivation 10

1.8 Problem Statement 10

1.9 Research Objectives 11

1.10 Methodologies/Approaches 12

1.10.1 Blockchain Integration 12

1.10.2 Experimental Validation 13

1.10.3 Performance Measure 13

1.11 Thesis Contributions 13

1.11.1 Development of a Blockchain-enabled Flow Integrity in the OpenFlow-based network 14

1.11.2 Development of a Blockchain-enabled Multi-Controller architecture in SDN network. 14

1.11.3 Development of a blockchain-enabled multi-stage proposal verification in multi-domain SDN network 15

1.11.4 Development of a blockchain token-based authentication of users in SDN network 15

1.12 Thesis Organization 16

2 Literature Review **18**

2.1 Traditional OpenFlow rule integrity without blockchain 18

2.2 Blockchain in SDN Security 19

2.2.1 Blockchain based solutions 19

2.2.2 Multicontroller architecture solutions 20

2.2.3 Multi-domain SDN solutions 20

2.2.4 Authentication solutions 21

3 Development of a Blockchain-enabled flow integrity in the OpenFlow networks 24

3.1 Introduction 24

3.2 Proposed Model 25

3.2.1 Architecture of the proposed FTISCON 25

3.2.2 Smart Contract Design 26

3.2.3 System Initialization 29

3.2.4 Threat Model 29

3.2.5 Transaction Formulation 32

3.2.6 Flow Rule Verification in FTISCON 36

3.3 Experimental Results 38

3.3.1 Environment Setup 38

3.3.2 Smart Contract Deployment 39

3.3.3 Performance Evaluation 41

3.3.4 Security Analysis 47

3.3.5 Complexity Analysis 48

3.3.6 Discussion 49

3.4 Conclusion 51

4 Development of a Blockchain-enabled Multi-controller Architecture in SDN Network 52

4.1 Introduction . . . 52

4.2 Proposed Model . . . 53

4.2.1 Architecture . . . 53

4.2.2 Formulation of proposed SDBlock-IoT . . . 56

4.2.3 Consensus Process for Master Controller Update . . . 57

4.2.4 Forwarding Rule Management in the Blockchain . . . 66

4.2.5 Flow Verification by Smart Agent . . . 67

4.2.6 Use of Admin modifier in Smart Contract . . . 68

4.3 Performance Evaluation and Results . . . 69

4.3.1 Physical Environment Setup . . . 69

4.3.2 Experimental Results . . . 70

4.4 Discussion . . . 77

4.5 Conclusion . . . 79

5 Development of a Blockchain-enabled Multi-Stage Proposal Verification in Multi-domain SDN Network 80

5.1 Introduction . . . 80

5.2 Proposed Model . . . 81

5.2.1 Architecture . . . 82

5.2.2 System Model . . . 82

5.2.3 Chaincode Design 93
5.3 Experimental Results 97
5.3.1 Environment Setup 97
5.3.2 Performance evaluation 99
5.3.3 Security Analysis 103
5.4 Discussion 110
5.4.1 Use Cases 113
5.5 Conclusion 114

6 Development of a Blockchain Token-based Authentication of users in SDN Network 115

6.1 Introduction 115
6.2 Proposed Model 116
6.2.1 System Architecture 116
6.2.2 Blockchain Token Based User Authentication 117
6.3 Results 120
6.3.1 Latency Analysis 121
6.3.2 Cost Analysis 121
6.3.3 Discussion 122
6.4 Conclusion 123

7 Conclusion and Future Directions 125

7.1 Research Findings 125

7.2 Limitations 126

7.3 Future Directions 127
