Abstract			i-iii
Declaration			iv
Certificate of the supervisor			v
Acknowledgement			vi-vii
Table of Contents			viii-xii
List of Tables			xiii-xv
List of Figures			xvi-xvii
List of abbreviations			xviii-xix
List of symbols			x
Chapter 1			**1-7**
Introduction			
Chapter 2			**9-24**
Review of literature			
2.1	Nutritional properties of pineapple		9
2.2	Enzymatic activity of pineapple		9
2.3	Cold plasma treatments		10
2.4	Processing of pineapple		11
2.5	Foam mat-drying		14
2.6	Foaming process		14
2.7	Principles of foam mat drying		15
2.8	Basic concepts of foam		
	2.8.1	Theory of foam	16
2.9	Method of foaming		17
2.10	Foam forming agents		17
2.11	Protein containing foaming agent		17
2.12	Foam stabilizing agents		20
2.13	Foam stability		21
2.14	Rheology of puree/pulp		22
	Bibliography		25-29
Chapter 3			31-53
Methodology			
3.1	Materials and methods		31
	3.1.1	Raw material	31
	3.1.2	Chemicals	31

3.1.3	Equipment and Instruments	31
3.1.4	Preparation of sample	31
3.1.5	Cold plasma treatment	32
3.1.6	Enzyme activity measurement	33
	3.1.6.1 Crude enzyme extraction	33
	3.1.6.2 PPO and POD activity	35
3.1.7	Mathematical modelling of enzymes	35
3.1.8	Mathematical models	36
	3.1.8.1 First order model	36
	3.1.8.2 Weibull model	36
	3.1.8.3 Two fraction kinetic model	36
	3.1.8.4 Peleg model	37
	3.1.8.5 Logistic model	37
3.1.9	Physical & Chemical Analysis	37
	3.1.9.1 Colour	37
	3.1.9.2 Total phenolic content (TPC)	38
	3.1.9.3 DPPH scavenging activity	38
	3.1.9.4 pH and conductivity	38
3.1.10	Statistical analysis of the model parameters	38
3.1.11	Model validation	39
3.1.12	Foaming of pineapple pulp based upon product characteristics.	39
	3.1.12.1 Pineapple pulp foam preparation	40
	3.1.12.2 Experimental Design	40
3.1.13	Foaming behaviour	40
	3.1.13.1 Expansion volume (EV)	40
	3.1.13.2 Foam density (FD)	41
	3.1.13.3 Drainage volume (DV) and foam stability (FS)	41
3.1.14	Foam mat drying of pulp	42
	3.1.14.1 Drying models	42
3.1.15	Quality attributes of powder	42
3.1.16	Chemical properties	44
3.1.17	Statistics and interrelation	44
3.1.18	Effect of selected additives on the physical and rheological properties of foam	44
	3.1.18.1 Preparation of foam	44
3.1.19	Physical characteristics of foam	46
	3.1.19.1 Foam expansion, stability, and drainage volume	46
3.1.20	Rheology of pineapple foam	46

3.1.20.1 Steady rheology of foam 46
3.1.20.2 Dynamic rheology of foam 46
3.1.20.3 Time-dependent rheology of foam 47
3.1.20.4 Theoretical considerations 47
3.1.21 Drying of foam 49
3.1.22 Quality attributes of powder 49
3.1.23 Statistics and interrelation among rheological, foaming, and powder properties 49
3.1.24 To study the storage behaviour of pineapple pulp foam dried powder. 49
3.1.24.1 Preparation of powder samples 50
3.1.24.2 Isotherm study 50
3.1.24.3 Mathematical modelling of sorption isotherm 51
3.1.24.4 Thermodynamic properties of the Sorption phenomenon 51
3.1.25 Physicochemical properties of powder during storage 52
3.1.25.1 Total phenolic content (TPC) 52
3.1.25.2 DPPH radical scavenging activity 52
3.1.25.3 pH and acidity of powder 53
3.1.25.4 Q_{10} value of the powder 53
3.1.25.5 Statistical analysis 53
Bibliography 54-56

Chapter 4 57-134

Results and Discussions

4.1 Stability of CP-treated PPO and POD enzymes 57
4.2 Mathematical modeling of enzymes (PPO and POD) 65
4.2.1 First-order kinetics 65
4.2.2 Weibull model 72
4.2.3 Two-fraction kinetic model 72
4.2.4 Peleg model 73
4.2.5 Logistic model 74
4.3 Process standardization 74
4.4 Effect of DBD plasma treatment on the color value of pineapple pulp 75
4.5 Model validation 77
4.6 AIC and BIC for model selection 80
4.7 Interrelation between the model kinetic parameters 80
4.8 Effect of CP on physicochemical properties 85
4.8.1 TPC 85

	4.8.2	Effect of CP on DPPH	86
	4.8.3	pH and conductivity of Pineapple Pulp	87
4.9	Foaming properties		90
	4.9.1	Foam Expansion (FE)	91
	4.9.2	Foam density (FD)	91
	4.9.3	Foam stability and drainage volume	92
4.10	Drying characteristics of the foam		93
4.11	Powder characteristics of the pineapple powder sample		94
4.12	Interrelation between/among rheological, foam parameters, and powder attributes		97
	4.12.1	PCA interpretation	97
4.13	Chemical properties of powder		98
4.14	Standardization of the foaming process		98
4.15	Rheological characterization of foam		101
	4.15.1	Time-dependent flow characteristics of foam	102
	4.15.2	Steady rheology of foam	103
	4.15.3	Dynamic rheology of pulp foam	104
4.16	Physical characteristics of foam		111
	4.16.1	Foam properties (foam expansion, stability, and drainage volume)	111
	4.16.2	Rheological properties (B and M values and relaxation time (λ))	112
4.17	Quality attributes of powder		113
4.18	Pearson correlation		114
4.19	Interrelation between/among rheological, foam parameters, and powder attributes		115
4.20	Storage study of powder		120
	4.20.1	Moisture sorption isotherm of pineapple powder	120
	4.20.2	A_f and B_f value for the model validation	123
	4.20.3	AIC and BIC value for the model validation	126
4.21	Thermodynamic properties		126
	4.21.1	Net Isosteric heat (Q_{st}) of sorption and sorption entropy	126
	4.21.2	Enthalpy-Entropy Compensation Parameters	128
	4.21.3	Interrelation between Sorption entropy and isosteric heat of foam-dried powder	130
4.22	Physicochemical properties of powder during storage		132
	Bibliography		135-140
Chapter 5			**141-144**

Summary and Conclusions

5.1 Summary 141

5.2 Integrated Findings 143

5.3 Conclusions 143

5.4 Future scope 143

5.5 Contribution to Knowledge 144

Appendix
