

CONTENTS

1. INTRODUCTION.....	1-7
2. REVIEW OF LITERATURES.....	8-16
3. MATERIALS AND METHODS.....	17-35
3.1 Materials	
<i>3.1.1 Preliminary analysis of raw material</i>	
<i>3.1.2 Development of image processing based color measurement system using neural networking</i>	
<i>3.1.3 Classification of ripening stage of tomato (pattern classification) using neural networking</i>	
<i>3.1.4 Quality classification of tomato based on size</i>	
<i>3.1.5 Study of drying characteristics of tomato cubes of various sizes</i>	
<i>3.1.6 Study of color change kinetic parameters of tomato cubes of various sizes</i>	
<i>3.1.7 Application of RSM for optimization of quality of tomato cubes dried in Fluidised bed dryer and study of shelf of dried tomato cubes</i>	
3.2 Methods	
<i>3.2.1 Preliminary analysis of raw material</i>	
<i>3.2.2 Development of image processing based color measurement system using neural networking</i>	
<i>3.2.3 Classification of ripening stage of tomato (pattern classification) using neural networking</i>	
<i>3.2.4 Quality classification of tomato based on size</i>	
<i>3.2.5 Study of drying characteristics of tomato cubes of various sizes</i>	
<i>3.2.6 Study of color change kinetic parameters of tomato cubes of various sizes</i>	
<i>3.2.7 Application of RSM for optimization of quality of tomato cubes dried in Fluidised bed dryer and study of shelf of dried tomato cubes</i>	

3.3 ANN (Theoretical background)

4. RESULTS AND DISCUSSION..... 36-58

4.1 Results of preliminary analysis of raw material

4.2 Results of development of image processing based color measurement system using neural networking

4.3 Results of classification of ripening stage of tomato (pattern classification) using neural networking

4.4 Results of quality classification of tomato based on size

4.5 Results of study of drying characteristics of tomato cubes of various sizes

4.6 Results of study of color change kinetic parameters of tomato cubes of various sizes

4.7 Results of application of RSM for optimization of quality of tomato cubes dried in Fluidised bed dryer and study of shelf of dried tomato cubes

5. CONCLUSIONS..... 59- 60

6. REFERENCES..... 61-64

7. APPENDIX.....65-70

LISTS OF FIGURES

Fig. No.	Title	Page No.
1.1	Computer Vision System.	03
1.2	L*a*b* color space.	04
1.3	Interaction of RGB and L*a*b.	04
3.1	Image acquisition system (digital camera).	18
3.2	Image Processing Setup used for Capturing Image.	19
3.3	Wolf faust color card (IT8.7/2-1993)	20
3.4	Tray dryer.	22
3.5	Digital Anemometer.	23
3.6	Over-all view of image processing steps.	27
3.7	Images of three ripening stages of tomato.	28
3.8	Images of two perpendicular planes of tomato for area determination.	28
3.9	Selection of region for area calculation and conversion to greyscale.	29
3.10	Multi-layer neural network.	35
4.1	Relation between lycopene content and sq. of a*/b*.	37
4.2	Decrease in neural network training performance (MSE) with no. of hidden neurons.	37
4.3	Neural network training for development of color measuring system (nntraintool).	38
4.4	Best validation performance (ANN for development of color measurement system, NN ₁).	39
4.5	Training and validation performance (ANN for development of color measurement system, NN ₁).	39
4.6	R value for training, validation, test and over-all (ANN for development of color measurement system, NN ₁).	39
4.7	Outputs of training, validation and test (pattern classification, NN ₂).	40
4.8	Best validation performance (pattern classification, NN ₂).	41

4.9	Training and validation performance (pattern classification, NN ₂).	41
4.10	Receiver operating characteristics (pattern classification, NN ₂).	41
4.11	Best validation performance (ANN for area and weight, NN ₃).	43
4.12	Training and validation performance (ANN for area and weight, NN ₃).	43
4.13	R value for training , validation ,test and over-all.	43
4.14	Midilli-Kucuk model curves showing actual MR vs predicted MR at 45°C.	46
4.15	Midilli-Kucuk model curves showing actual MR vs predicted MR at 45°C.	46
4.16	Midilli-Kucuk model curves showing actual MR vs predicted MR at 45°C.	47
4.17	Effect of different factors on K	47
4.18	Effect of different factors on k _c .	49
4.19	Effect of different factors on Moisture content	50
4.20	Effect of different factors on Rehydration ratio.	50
4.21	Effect of different factors on ΔE .	50
4.22	Color change in 0.5 cm sized cubes survived upto 60 days.	56
4.23	Color change in 1cm sized cubes survived upto 60 days	57-58

LISTS OF TABLES

Table No.	Title	Page No.
3.1	Sample coding for drying kinetic and color kinetics study.	30
3.2	List of drying models.	30
3.3	Different factors for RSM.	32
3.4	Experimental design based on Box- using Behnken design.	32
4.1	Moisture content ,TSS, Titrable acidity of tomato.	36
4.2	Lycopene content and square of a*/b* values of corresponding tomato.	37
4.3	Midilli-Kucuk model parameters for different samples	45
4.4	ANOVA for Factorial 2FI Model.	48
4.5	R-square and drying rate constant value of 1 st order color degradation.	48
4.6	ANOVA chart for Factorial 2FI Model.	49
4.7	Moisture content, rehydration ratio and ΔE values in FBD.	50
4.8	ANOVA for Response Surface Quadratic Model.	52
4.9	ANOVA for Response Surface Quadratic Model.	53
4.10	ANOVA for Response Surface Quadratic Model.	54

List of abbreviations

AA – Ascorbic acid.

ANN – Artificial neural network.

ASLT - Accelerated Shelf Life Testing .

ATP – Adenosine tri-phosphate.

CVS – Computer vision system.

EF - Modeling efficiency.

HPLC – High performance liquid chromatography.

LDA – Linear discriminant analysis.

LDPE – Low density polyethylene.

MC_{db} – Dry basis moisture content.

MC_{wb} – Wet basis moisture content.

MIMO – Multiple-Input Multiple-Output

MLP – Multi-layer perceptron.

MR – Moisture ratio.

NN – Neural networks.

PE – Processing data.

R² – Coefficient of performance.

RMSE – Root mean square error.

SSE – Sum of square errors.

TA – Titrable acidity.

TSS – Total soluble solids.

ΔE – Delta E.

χ² – Chi-square.
