Chapter 1

General introduction 1-17

1.1. Introduction 1-2

1.1.1. Background 2

1.1.2. Synthesis of hyperbranched polymer 3-4

1.1.3. Properties of Hyperbranched polymer 4-5

1.1.4. Applications 5-7

1.2. Materials and methods 7-14

1.2.1. Materials 7-9

1.2.1.1. Flame retardant additives 7

1.2.1.2. Base polymer (polyethylene) 7-8

1.2.1.3. Nanofiller 8-9

1.2.2. Methods 9-10

1.2.2.1. Synthesis of Hyperbranched polyamine by A_2+B_3 approach 9-10

1.2.2.2. Compounding 10

1.2.2.3. Compression moulding 10

1.2.3. Characterization techniques and methods 11-14

1.2.3.1. Spectroscopic techniques 11

1.2.3.2. Degree of branching 11-12

1.2.3.3. Physical properties 12

1.2.3.3.1. Solubility 12

1.2.3.3.2. Viscosity 12

1.2.3.4. XRD 13

1.2.3.5. Thermal property 13

1.2.3.6. Mechanical Properties 13
1.2.3.6.1. Tensile strength 13
1.2.3.6.2. Hardness 13
1.2.3.7. Flame retardancy 14
1.2.3.8. SEM analysis 14
1.7. Literature review 15-16
1.8. Scope and objectives of the present investigation 17
1.9. Plane of work 17

Chapter 2

Experimental 18-23
2.1. Introduction 18
2.2. Preparation of hyperbranched polyamine and nanocomposites 18-21
2.2.1. Materials 18-19
2.2.2. Methods 19-23
2.2.2.1. Synthesis of hyperbranched polyamine 19-20
2.2.2.2. Preparation of the nanocomposites 21
2.3. Characterization techniques and instrumentation 21-23

Chapter 3

Results and Discussions 24-36
3.1. Introduction 24
3.2 .Characterization of the hyperbranched polyamine 25-32
3.2.1. FTIR study 25-26
3.2.1. ^{1}H NMR study 27-28
3.2.3. Degree of branching 28
3.2.4 .Physical properties of the polymer 29

3.2.5. XRD study 30

3.2.6. TGA analysis of the hyperbranched polyamine 31

3.3. Performance of the composites 32-36

3.3.1. Flame retardancy 32

3.3.2. TGA analysis of the composites 33-34

3.3.3. Mechanical properties 35

3.3.4. Morphology 36

Chapter 4

Conclusion and Future scope 37

4.1. Conclusion 37

4.2. Future scope 37

References 38-41
