

| CHAPTERS                                        | CONTENTS                                                         | Page no               |       |
|-------------------------------------------------|------------------------------------------------------------------|-----------------------|-------|
| Chapter-I                                       | 1. Introduction                                                  | 1                     |       |
|                                                 | 1.1 Core-Shell nano composites                                   | 1-5                   |       |
|                                                 | 1.1.1 Types of core-shell nanocomposites                         | 5-6                   |       |
|                                                 | 1.1.2 Preparation of core-shell nanocomposites                   | 6-7                   |       |
|                                                 | 1.1.3 Advantages of core-shell nanocomposites                    | 7                     |       |
|                                                 | 1.2 Nanomaterials                                                | 8                     |       |
|                                                 | 1.2.1 Properties of nanomaterials                                | 8                     |       |
|                                                 | 1.3 Conducting Polymers                                          | 9                     |       |
|                                                 | 1.4 Expanded Graphite(EG)                                        | 10                    |       |
|                                                 | 1.4.1 Properties of Expanded Graphite                            | 11                    |       |
|                                                 | 1.4.2 Preparation of Expanded Graphite                           | 11-12                 |       |
|                                                 | Chapter-II                                                       | 2.1 Literature Review | 13-17 |
|                                                 |                                                                  | 2.2 Objectives        | 18    |
|                                                 |                                                                  | 2.3 Plan of work      | 18    |
| Chapter-III                                     | 3.Experimental                                                   | 19                    |       |
|                                                 | 3.1 Materials and methods                                        | 19                    |       |
|                                                 | 3.2 Preparation of poly (styrene-co-butyl methacrylate) (PS-PBA) | 19                    |       |
|                                                 | 3.3 Preparation of PS-PBA/PPy-EG core-shell                      | 20                    |       |
|                                                 | 3.4 Characterisation Techniques                                  | 20                    |       |
|                                                 | 3.4.1 UV-visible spectroscopy(UV/Vis)                            | 20-21                 |       |
|                                                 | 3.4.2 Fourier Transform infra-red (FT-IR) spectroscopy           | 21                    |       |
|                                                 | 3.4.3 Scanning Electron Microscopy(SEM)                          | 22                    |       |
| 3.4.4 Energy Dispersive X-Ray(EDX) spectroscopy | 22-23                                                            |                       |       |

|            |                                                                              |       |
|------------|------------------------------------------------------------------------------|-------|
|            | 3.4.5 Transmission Electron Microscopy (TEM)                                 | 23-24 |
|            | 3.4.6 X-ray Diffraction analysis(XRD)                                        | 24    |
|            | 3.4.7 Thermo Gravimetric analysis (TGA)                                      | 25    |
|            | 3.4.8 Keithley Series 2400 Digital Source-meter instrument<br>(I-V Analysis) | 25-26 |
|            | 3.4.8.1 Related application Devices                                          | 26-27 |
|            | 3.4.9 Cyclic Voltammetry(C-V)                                                | 27-28 |
| Chapter-IV | 4.Results and Discussion                                                     | 29    |
|            | 4.1 FTIR analysis(FT-IR)                                                     | 29    |
|            | 4.2 Surface Morphology Analysis                                              | 30    |
|            | 4.2.1 Scanning Electron Microscope (SEM)                                     | 30    |
|            | 4.2.2 Energy Dispersive X-ray(EDX) analysis                                  | 30    |
|            | 4.2.3 Transmission Electron Microscope(TEM)                                  | 31    |
|            | 4.3 X-Ray Diffraction analysis(XRD)                                          | 31-32 |
|            | 4.4 TG Analysis(TGA)                                                         | 32-33 |
|            | 4.5 Current-voltage relationship                                             | 33-34 |
|            | 4.6 Electrochemical property                                                 | 34    |
|            | 4.6.1 Charge capacity                                                        | 34-35 |
| Chapter-V  | 5 Conclusion                                                                 | 36    |
|            | References                                                                   | 37-38 |
