

TABLE OF CONTENTS

	Page no
Chapter 1: Introduction	1
Chapter 2: Review of Literature.....	5
2.1 Consumer's perception on minimally processed vegetables.....	6
2.2 Use of calcium chloride in minimal processing.....	7
2.3 Use of sodium hypochlorite in minimal processing.....	11
2.4 Microbiology and nutritional quality of minimally processed vegetables...	13
Chapter 3: Materials and Methods.....	18
3.1 Raw materials.....	18
3.2 Preparation of solution.....	18
3.3 Method of minimal processing.....	18
3.4 Analysis of minimally processed vegetable.....	19
Chapter 4: Results and Discussion.....	22
4.1 Effect on colour and texture.....	22
4.2 Effect on moisture content.....	24
4.3 Effect on protein.....	34
4.4 Effect on ash content.....	34
4.5 Effect on crude fibre.....	34
4.6 Effect on ascorbic acid.....	34
4.7 Effect on water activity.....	42
4.8 Effect on microbial load.....	44
Chapter 5: Summary and Conclusion.....	52
Chapter 6: Future scope of work.....	54
References.....	55

LIST OF TABLES

Table. no	Table	Page no
4.2.1	Effect of cutting knife and sodium hypochlorite dip solution in moisture content (%) of minimally processed vegetables stored in different packaging material	25
4.2.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in moisture content (%) of minimally processed vegetables stored in different packaging material	25
4.3.1	Effect of cutting knife and sodium hypochlorite dip solution in protein (%) content of minimally processed vegetables stored in different packaging material.	31
4.3.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in protein (%) content of minimally processed vegetables stored in different packaging material.	31
4.4.1	Effect of cutting knife and sodium hypochlorite dip solution in ash (%) content of minimally processed vegetables stored in different packaging material.	32
4.4.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in ash (%) content of minimally processed vegetables stored in different packaging material.	32
4.5.1	Effect of cutting knife and sodium hypochlorite dip solution in crude fibre content (g) of minimally processed vegetables stored in different packaging material	33
4.5.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in crude fibre content (g) of minimally processed vegetables stored in different packaging material	33
4.6.1	Effect of cutting knife and sodium hypochlorite dip solution in ascorbic acid (mg/100g) content of minimally processed vegetables stored in different packaging material.	35
4.6.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in ascorbic acid (mg/100g) content of minimally processed vegetables stored in different packaging material	35
4.7.1	Effect of cutting knife and sodium hypochlorite dip solution in water activity of minimally processed vegetables stored in different packaging material.	41
4.7.2	Effect of cutting knife and sodium hypochlorite-calcium chloride dip solution in water activity of minimally processed vegetables stored in different packaging material.	41
4.8.1	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed beans stored in different packaging material	45
4.8.2	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed beans stored in different packaging material	45
4.8.3	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed capsicum stored in different packaging material	46

4.8.4	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed capsicum stored in different packaging material	46
4.8.5	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed knol-khol stored in different packaging material	47
4.8.6	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed knol-khol stored in different packaging material	47

LIST OF FIGURES

Fig. no	Figure	Pg. no
4.1.1	Colour and texture of capsicum dipped in sodium hypochlorite-calcium chloride solution and packed in HDPP on fourth day of storage	22
4.1.2	Colour and texture deterioration on tenth day of storage of beans and capsicum dipped in sodium hypochlorite and packed in LDPP.	23
4.2.1	Effect of sodium hypochlorite dip treatment in moisture content of minimally processed vegetables cut with iron knife and stored in HDPP.	26
4.2.2	Effect of sodium hypochlorite dip treatment in moisture content of minimally processed vegetables cut with iron knife and stored in LDPP	26
4.2.3	Effect of sodium hypochlorite dip treatment in moisture content of minimally processed vegetables cut with stainless steel knife and stored in HDPP.	27
4.2.4	Effect of sodium hypochlorite dip treatment in moisture content of minimally processed vegetables cut with stainless steel knife and stored in LDPP.	27
4.2.5	Effect of sodium hypochlorite-calcium chloride dip treatment in moisture content of minimally processed vegetables cut with iron knife and stored in HDPP	28
4.2.6	Effect of sodium hypochlorite-calcium chloride dip treatment in moisture content of minimally processed vegetables cut with iron knife and stored in LDPP	28
4.2.7	Effect of sodium hypochlorite-calcium chloride dip treatment in moisture content of minimally processed vegetables cut with stainless steel knife and stored in HDPP	29
4.2.8	Effect of sodium hypochlorite-calcium chloride dip treatment in moisture content of minimally processed vegetables cut with stainless steel knife and stored in LDPP	29
4.6.1	Effect of sodium hypochlorite dip treatment in ascorbic acid concentration of minimally processed vegetables cut with iron knife and stored in HDPP.	36
4.6.2	Effect of sodium hypochlorite dip treatment in ascorbic acid concentration of minimally processed vegetables cut with stainless steel knife and stored in HDPP.	36
4.6.3	Effect of sodium hypochlorite dip treatment in ascorbic acid concentration of minimally processed vegetables cut with iron knife and stored in LDPP	37
4.6.4	Effect of sodium hypochlorite dip treatment in ascorbic acid concentration of minimally processed vegetables cut with stainless steel knife and stored in LDPP	37

4.6.5	Effect of sodium hypochlorite-calcium chloride dip treatment in ascorbic acid concentration of minimally processed vegetables cut with iron knife and stored in HDPP	38
4.6.6	Effect of sodium hypochlorite-calcium chloride dip treatment in ascorbic acid concentration of minimally processed vegetables cut with iron knife and stored in LDPP	39
4.6.7	Effect of sodium hypochlorite-calcium chloride dip treatment in ascorbic acid concentration of minimally processed vegetables cut with stainless steel knife and stored in HDPP	39
4.6.8	Effect of sodium hypochlorite-calcium chloride dip treatment in ascorbic acid concentration of minimally processed vegetables cut with stainless steel knife and stored in LDPP.	40
4.7.1	Effect of sodium hypochlorite solution in water activity of minimally processed vegetables stored in HDPP.	42
4.7.2	Effect of sodium hypochlorite solution in water activity of minimally processed vegetables stored in LDPP.	43
4.7.3	Effect of sodium hypochlorite-calcium chloride solution in water activity of minimally processed vegetables stored in HDPP.	43
4.7.4	Effect of sodium hypochlorite-calcium chloride solution in water activity of minimally processed vegetables stored in LDPP.	44
4.8.1	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed beans stored in HDPP	48
4.8.2	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed beans stored in LDPP	48
4.8.3	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed beans stored in HDPP	49
4.8.4	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed capsicum stored in HDPP	49
4.8.5	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed capsicum stored in HDPP	50
4.8.6	Effect of sodium hypochlorite dip solution in microbial load (cfu/ml) of minimally processed knol-khol stored in HDPP	50
4.8.7	Effect of sodium hypochlorite-calcium chloride dip solution in microbial load (cfu/ml) of minimally processed knol-khol stored in HDPP	51
