

List of Tables

Table	Caption	Page No.
Table 1.1	Typical properties of solitons, polarons and bipolarons.	8
Table 3.1	Physical properties of the pyrrole monomer.	50
Table 3.2	Physical properties of dopants, oxidant and plasticizer used in synthesis.	51
Table 3.3	Physical properties of oxidant.	51
Table 3.4	Physical properties of plasticizer.	52
Table 3.5	Physical properties of solvents.	52
Table 3.6	SRIM data for 160 MeV Ni ¹²⁺ ions in polypyrrole nanostructures.	61
Table 4.1	Values of angle of diffraction (2θ), ordering of chains (X_C), extent of chain order (L), interplanar spacing (d) and hopping distance (R) of PPy nanoparticles at different SDS concentrations.	78
Table 4.2	Degradation temperatures at different percentage weight losses for PPy nanoparticles at different SDS molar concentrations.	84
Table 4.3	Onset decomposition temperature (T_{onset}), maximum decomposition temperature (T_m) and maximum decomposition rate $(dW/dT)_m$ for PPy nanoparticles at different SDS molar concentrations.	85
Table 4.4	Room temperature (303 K) values of maximum of imaginary part of modulus (M''_{max}), relaxation frequency (ω_{max}), relaxation time (τ) and Kohlrausch stretched parameter (β) of charge carriers in PPy nanoparticles at different SDS concentrations.	92
Table 4.5	Room temperature (303 K) dc conductivity (σ_{dc}) and frequency exponent (s) of PPy nanoparticles at different SDS concentrations.	95

Table	Caption	Page No.
Table 4.6	Values of barrier activation energy (W_H) for charge carriers in PPy nanoparticles at different SDS concentrations at room temperature (303 K).	96
Table 4.7	Values of ordering of polymer chains (X_C), full width at half maximum (β), interplanar spacing (d), extent of ordering (L) and hopping distance (R) of pristine and irradiated PPy nanoparticles at different ion fluences.	101
Table 4.8	Values of optical band gap energies (E_g) of pristine and irradiated PPy nanoparticles at different ion fluences.	105
Table 4.9	Degradation temperatures at different percentage weigh losses, onset decomposition temperature, T_{onset} and maximum decomposition rate, $(dW/dT)_m$ for both pristine and irradiated PPy nanoparticles at different irradiation fluences.	108
Table 4.10	Values of relaxation time (τ) and hopping activation energy (E_{aM}) of both pristine and irradiated PPy nanoparticles at different ion fluences.	114
Table 4.11	Values of frequency exponent (s) and barrier activation energy (W_H) for charge carriers in both pristine and irradiated PPy nanoparticles at room temperature (303 K).	116
Table 5.1	Values of diffraction peak position (2θ), ordering of chains (X_C), interplanar spacing (d) and hopping distance (R) of different ABSA doped PPy nanofibers.	125
Table 5.2	Values of integrated peak area ratio of I_{1464}/I_{1544} (I_{1464}/I_{1550} , I_{1464}/I_{1555} , I_{1460}/I_{1542}) of different ABSA doped PPy nanofibers.	127
Table 5.3	Degradation temperature at different percentage weight losses for PPy nanofibers doped with different ABSA dopants.	132

Table	Caption	Page No.
Table 5.4	Onset decomposition temperature, T_{onset} and maximum decomposition temperature, T_m for PPy nanofibers doped with different ABSA dopants.	132
Table 5.5	Values of maximum of imaginary part of modulus (M''_{max}), relaxation frequency (ω_{max}), relaxation time (τ) and Kohlrausch stretched parameter (β) for charge carriers of different ABSA doped PPy nanofibers at room temperature (303 K).	138
Table 5.6	Values of frequency exponent (s) and barrier activation energy (W_H) of different ABSA doped PPy nanofibers at room temperature (303 K).	144
Table 5.7	Values of diffraction peak (2θ), chain ordering (X_C), interplanar spacing (d) and hopping distance (R) of pristine and irradiated PPy nanofibers at ion fluences of 10^{10} , 5×10^{10} , 10^{11} , 5×10^{11} and 10^{12} ions/cm ² .	148
Table 5.8	Values of optical band gap energy (E_g), number of carbon atoms per conjugation length (N) and number of carbon atoms per cluster (M) of the pristine and irradiated PPy nanofibers at ion fluences of 10^{10} , 5×10^{10} , 10^{11} , 5×10^{11} and 10^{12} ions/cm ² .	153
Table 5.9	Degradation temperature at different percentage weight losses and maximum decomposition rate, $(dW/dT)_m$ for pristine and irradiated PPy nanofibers at different ion fluences.	156
Table 5.10	Relaxation frequency (ω) and relaxation time (τ) for charge carriers in both pristine and irradiated PPy nanofibers at different ion fluences.	160

Table	Caption	Page No.
Table 5.11	Room temperature (303 K) values of frequency exponent (s) and barrier activation energy (W_H) of pristine and irradiated PPy nanofibers at different ion fluences.	163
Table 6.1	Values of angle of diffraction (2θ), full width at half-maximum (β), ordering of chains (X_c), extent of chain order (L) and hopping distance (R) of PPy nanotubes at different CSA/Py molar ratios.	173
Table 6.2	Values of integrated peak area ratios of I_{1476}/I_{1563} of PPy nanotubes synthesized at different CSA/Py molar ratios.	176
Table 6.3	Values of optical band gap energies (E_g) of PPy nanotubes at different CSA/Py molar ratios.	179
Table 6.4	Degradation temperatures at different percentage weight losses (%), maximum decomposition temperature, (T_m) and maximum decomposition rate, $(dW/dT)_m$ for PPy nanotubes at various CSA/Py molar ratios.	181
Table 6.5	Different dielectric relaxation parameters for PPy nanotubes using Havriliak-Nigami (HN) equation.	184
Table 6.6	Values of relaxation frequency (ω_{max}) and relaxation time (τ) of PPy nanotubes for CSA/Py molar ratio of 2:1 at different temperatures.	190
Table 6.7	Values of maximum imaginary modulus (M''_{max}), relaxation frequency (ω_{max}), relaxation time (τ) and stretched exponent (β) of PPy nanotubes at various CSA/Py molar ratios at room temperature (303 K).	191
Table 6.8	Room temperature values of dc conductivity (σ_{dc}), hopping frequency (ω_H), frequency exponent (s) and barrier activation energy (W_H) for PPy nanotubes at different CSA/Py molar ratios.	195

Table	Caption	Page No.
Table 6.9	Angle of diffraction (2θ), crystallinity (X_c), inter-planar spacing (d), hopping distance (R) and extent of chain order (L) of pristine and irradiated PPy nanotubes at different ion fluences.	204
Table 6.10	Direct and indirect band gap energies (E_g), number of carbon atoms per conjugation length (N) of the pristine and irradiated PPy nanotubes at different ion fluences.	209
Table 6.11	Values of maximum decomposition rate, $(dW/dT)_m$ for pristine and irradiated PPy nanotubes at irradiation fluences of 10^{10} , 5×10^{10} , 10^{11} , 5×10^{11} and 10^{12} ions/cm ² .	211
Table 6.12	Relaxation frequency (ω_{max}) and relaxation time (τ) for charge carriers in the pristine and irradiated PPy nanotubes at room temperature (303 K).	216
Table 6.13	Frequency exponent (s) and barrier activation energy (W_H) of pristine and irradiated PPy nanotubes at different irradiation fluences at room temperature (303 K).	219

Figure	Caption	Page No.
Figure 1.1	Chemical structure of some mostly studied conducting polymers.	2
Figure 1.2	Diagram showing range of conductivity for various materials including conducting polymers.	2
Figure 1.3	Different applications of conducting polymers as smart window, solar cell, actuator, organic light emitting diodes and organic thin film transistor.	3
Figure 1.4	Action of a dopant on polymer	8
Figure 1.5	Energy level diagrams for metal, semiconductor and insulator.	10
Figure 1.6	HOMO-LUMO theory in organic semiconductor polymers.	11
Figure 1.7	Chemical oxidative polymerization and doping process in pyrrole.	13
Figure 1.8	Oxidation states of pyrrole.	13
Figure 1.9	Electronic energy diagrams for (a) neutral, (b) polaron (c) bipolaron and (d) fully doped polypyrrole.	14
Figure 1.10	Reduced (top) and oxidized (bottom) states of polypyrrole.	15
Figure 1.11	Conduction mechanism for the oxidative polymerization of polypyrrole.	15
Figure 1.12	Pictorial representation of soft-template synthesis of different nanostructures of conducting polymers.	18

Figure	Caption	Page No.
Figure 1.13	Schematic of hard template synthesis of different conducting polymer nanostructures: (a) porous membrane as the hard template to produce conducting polymer nanotubes and nanowires. At first the growth of the conducting polymer is guided within the pores or channels of the membrane and then the template is removed after the polymerization; (b) Colloidal particles as the hard template to produce nanoporous membranes. The monomer is polymerized in the voids between the colloidal particles. When the colloidal particles are removed, a 3-D particle structure results.	20
Figure 1.14	Block diagram for SHI irradiation in materials.	27
Figure 3.1	Block diagram for synthesis of polypyrrole nanoparticles using micro-emulsion polymerization method.	54
Figure 3.2	Block diagram for synthesis of polypyrrole nanofibers using novel interfacial polymerization method.	55
Figure 3.3	Block diagram for synthesis of polypyrrole nanotubes by self-assembly polymerization method.	57
Figure 3.4	Schematic block diagram showing the principle of acceleration of ions in a Pelletron.	57
Figure 3.5	Photographs of (a) Materials Science (MS) beam line and (b) the high vacuum irradiation chamber.	59
Figure 3.6	Transmission electron microscope (JEOL, JEM-2100, 200 kV) at SAIF, NEHU, Shillong.	63
Figure 3.7	Rigaku Miniflex X-ray diffractometer installed at the Department of Physics, Tezpur University.	64
Figure 3.8	Perkin Elmer Spectrum 100 spectrophotometer installed at Department of Chemical Sciences, Tezpur University, Assam, India.	65

Figure	Caption	Page No.
Figure 3.9	UV-visible spectrophotometer (ShimadzuUV-2450) installed at Department of Physics, Tezpur University, India.	67
Figure 3.10	Thermogravimetric analyzer, Perkin Elmer STA 6000 installed at Materials Research Laboratory, Dept. of Physics, Tezpur University.	68
Figure 3.11	HIOKI 3532-50 LCR HiTESTER installed at Materials Research Laboratory, Department of Physics, Tezpur University.	69
Figure 4.1	HRTEM micrographs of PPy nanoparticles synthesized at (a) 0.01 M, (b) 0.05 M, (c) 0.1 M and (d) 0.2 M SDS concentration.	76
Figure 4.2	Histograms of PPy nanoparticles synthesized at (a) 0.01 M, (b) 0.05 M, (c) 0.1 M and (d) 0.2 M SDS concentration.	76
Figure 4.3	XRD patterns of PPy nanoparticles synthesized at (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M SDS concentration.	77
Figure 4.4	Plots of (i) FTIR spectra and (ii) integrated peak area ratio I_{1465}/I_{1550} (I_{1460}/I_{1550} , I_{1458}/I_{1550} , I_{1450}/I_{1550}) of PPy nanoparticles synthesized at SDS concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	80
Figure 4.5	UV-vis absorption spectra of PPy nanoparticles at SDS concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M .	81
Figure 4.6	Plots of $(\alpha h\nu)^2$ vs. $h\nu$ of PPy nanoparticles at SDS concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	82
Figure 4.7	TGA thermographs of PPy nanoparticles at SDS molar concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	83

Figure	Caption	Page No.
Figure 4.8	Derivative plots of TGA thermographs for PPy nanoparticles at SDS molar concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	83
Figure 4.9	Room temperature (303 K) plots of dielectric permittivity (ϵ') vs. frequency (ω) of PPy nanoparticles at SDS concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	86
Figure 4.10	Room temperature (303 K) plots of dielectric loss (ϵ'') vs. frequency (ω) of PPy nanoparticles at SDS concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M.	87
Figure 4.11	Plots of real part of modulus (M') vs. frequency (ω) of PPy nanoparticles at SDS molar concentrations of (a) 0.01, (b) 0.05, (c) 0.1 M and and (d) 0.2 M at room temperature (303 K).	88
Figure 4.12	Plots of imaginary part of modulus (M'') vs. frequency (ω) of PPy nanoparticles at SDS molar concentrations of (a) 0.01, (b) 0.05, (c) 0.1 M and and (d) 0.2 M at room temperature (303 K).	89
Figure 4.13	Temperature dependence plots of M'' vs. ω of PPy nanoparticles at 0.2 M SDS concentration.	90
Figure 4.14	Plots of $\ln(\tau)$ vs. $1000/T$ of PPy nanoparticles at SDS concentration of 0.2 M SDS.	91
Figure 4.15	Plots of frequency dependence of total conductivity $\sigma'(\omega)$ of PPy nanoparticles at SDS molar concentrations of (a) 0.01 M (b) 0.05 M (c) 0.1 M and (d) 0.2 M at room temperature (303 K).	93
Figure 4.16	Plots of frequency exponent (s) vs. temperature of PPy nanoparticles at different SDS concentrations.	95

Figure	Caption	Page No.
Figure 4.17	HRTEM micrographs for (a) pristine and irradiated PPy nanoparticles at irradiation fluences of (b) 5×10^{10} and (c) 10^{12} ions/cm ² .	98
Figure 4.18	XRD patterns of (a) pristine and irradiated PPy nanoparticles at ion fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ions/cm ² .	99
Figure 4.19	FTIR spectra of (a) pristine and irradiated PPy nanoparticles at irradiation fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ions/cm ² .	101
Figure 4.20	Plots of areas of IR active vibrational modes of pristine and irradiated PPy nanoparticles at different ion fluences.	102
Figure 4.21	Plots of $\log_{10}[I(\phi)/I_o]$ vs. ion fluence (ϕ) of the vibrational bands positioned at 3695, 2377, 1632 and 1423 cm ⁻¹ of PPy nanoparticles.	103
Figure 4.22	UV-vis absorption spectra of (a) pristine and irradiated PPy nanoparticles at irradiation fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ion/cm ² , respectively.	104
Figure 4.23	Plots of $(\alpha h\nu)^2$ vs. $h\nu$ of (a) pristine and irradiated PPy nanoparticles at irradiation fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ion/cm ² , respectively.	105
Figure 4.24	TGA thermographs of (a) pristine and irradiated PPy nanoparticles at ion fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ion/cm ² .	106
Figure 4.25	Derivative plots of TGA thermographs for (a) pristine and irradiated PPy nanoparticles at different irradiation fluences of (b) 5×10^{10} , (c) 10^{11} , (d) 5×10^{11} and (e) 10^{12} ions/cm ² , respectively.	107

Figure 6.6	Plots of $(\alpha h\nu)^2$ vs. $h\nu$ of PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1.	178
Figure 6.7	Plots of TGA thermographs of PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1 (c) 1:1 and (d) 2:1.	179
Figure 6.8	Derivative plots of TGA thermographs for PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1.	180
Figure 6.9	Room temperature plots of dielectric permittivity (ϵ') vs. frequency (ω) of PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1.	183
Figure 6.10	Temperature dependence of dielectric permittivity (ϵ') of PPy nanotubes at frequencies of (i) 100 Hz and (ii) 1000 Hz at different CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1.	184
Figure 6.11	Plots of dielectric loss (ϵ'') vs. frequency (ω) of PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1 at room temperature.	185
Figure 6.12	Plots of real part of modulus (M') vs. frequency (ω) of PPy nanotubes at CSA/Py ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1 at room temperature (303 K).	188

Figure	Caption	Page No.
Figure 6.13	Plots of imaginary part of modulus (M'') vs. frequency (ω) of PPy nanotubes at CSA/Py ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1 at room temperature (303 K).	188
Figure 6.14	Temperature dependence of M'' spectra of PPy nanotubes at CSA/Py molar ratio of 2:1.	189
Figure 6.15	Plots of $\ln(\tau)$ vs. $1000/T$ of PPy nanotubes at CSA/Py molar ratio of 2:1.	190
Figure 6.16	Scaling of M'' spectra of PPy nanotubes at CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1 at room temperature (303 K).	192
Figure 6.17	Scaling of M'' spectra of PPy nanotubes at CSA/Py molar ratio of 2:1 at different temperatures.	193
Figure 6.18	Plots of total conductivity (σ') vs. frequency (ω) of PPy nanotubes at different CSA/Py molar ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1 at room temperature (303 K).	194
Figure 6.19	Plots of total conductivity $\sigma'(\omega)$ of PPy nanotubes at CSA/Py molar ratio of 2:1 at different temperatures.	195
Figure 6.20	Plots of (i) $\ln \sigma_{dc}$ vs. $1000/T$ and (ii) $\ln \omega_H$ vs. $1000/T$ of PPy nanotubes at CSA/Py molar ratio of 2:1.	196
Figure 6.21	Temperature dependence of frequency exponent (s) of PPy nanotubes at CSA/Py ratios of (a) 0.1:1, (b) 0.5:1, (c) 1:1 and (d) 2:1.	197
Figure 6.22	Scaling plots of total conductivity of PPy nanotubes for CSA/Py molar ratio of 2:1 at different temperatures.	199

Figure	Caption	Page No.
Figure 6.23	HRTEM micrographs of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 5×10^{11} and (c) 10^{12} ions/cm ² .	200
Figure 6.24	XRD diffraction patterns of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	201
Figure 6.25	FTIR spectra of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	205
Figure 6.26	UV-vis absorption spectra of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	206
Figure 6.27	Plots of variation of (i) $(\alpha h\nu)^2$ vs. $h\nu$ and (ii) $(\alpha h\nu)^{1/2}$ with $h\nu$ of pristine and irradiated PPy nanotubes at different ion fluences.	207
Figure 6.28	Comparison of direct and indirect band gap energies of pristine and irradiated PPy nanotubes at different irradiation fluences.	208
Figure 6.29	TGA thermographs of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	210
Figure 6.30	Derivative plots of TGA thermographs for (a) pristine and irradiated PPy nanotubes at irradiation fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	210
Figure 6.31	Plots of dielectric permittivity (ϵ') vs. frequency (ω) of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² at room temperature (303 K).	212

Figure	Caption	Page No.
Figure 6.32	Plots of dielectric loss (ϵ'') vs. frequency (ω) of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² at room temperature (303 K).	213
Figure 6.33	Plots of real part of modulus (M') vs. frequency (ω) of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² at room temperature (303 K).	214
Figure 6.34	Plots of imaginary part of modulus (M'') vs. frequency (ω) of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² at room temperature (303 K).	215
Figure 6.35	Room temperature scaling plots of imaginary part of modulus (M'') of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	216
Figure 6.36	Room temperature plots of total conductivity (σ') of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	217
Figure 6.37	Temperature variation of frequency exponent ' s ' of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	218
Figure 6.38	Room temperature scaling plots of total conductivity of (a) pristine and irradiated PPy nanotubes at ion fluences of (b) 10^{10} , (c) 5×10^{10} , (d) 10^{11} , (e) 5×10^{11} and (f) 10^{12} ions/cm ² .	220

List of Abbreviations

Abbreviation	Meaning
1-D	One dimensional
ABSA	Alkylbenzenesulfonic acids
APL	Antibonding polaron level
APS	Ammonium peroxydisulfate
BB	Bethe-Bloch
BJT	Bipolar junction transistors
BNN	Barton-Nakajima-Namikawa
BPL	Bonding polaron level
CBH	Correlated barrier hopping
CC	Cole-Cole
CCD	Charge-coupled device
cm	Centimetre
CMC	Critical micelle concentration
CSA	Camphorsulfonic acid
DBSA	Dodecylbenzenesulfonic acid
DC	Davison-Cole
DeTAB	Decyltrimethylammonium bromide
DTAB	Dodecyltrimethyl ammonium bromide
EMI	Electromagnetic interference
eV	Electron volt
FD	Frequency-domain
FET	Field effect transistor
FTIR	Fourier transform infrared spectroscopy
FWHM	Full width at half maximum
HEDS	High energy dead section
HN	Havriliak-Nigami
HOMO	Highest occupied molecular orbital
HRTEM	High resolution transmission electron microscopy

Abbreviation	Meaning
Hz	Hertz
ICP	Intrinsically conducting polymers
ITO	Indium-tin oxide
IUAC	Inter University Accelerator Centre
KeV	Kilo electron volt
KPS	Potassium persulfate
KWW	Kohlrausch-Williams-Watts
LEDS	Low energy dead section
LSS	Lindhard-Scharff-Schiøtt
LUMO	Lowest unoccupied molecular orbital
MHz	Mega Hertz
MIS	Metal/insulator/semiconductor
MISFET	Metal-insulator-semiconductor field effect transistor
MO	Methyl orange
MS	Materials Science
MWS	Maxwell-Wagner-Sillars
NIR	Near infrared
NSPT	Non-overlapping small polarons tunnelling
OBSA	Octylbenzenesulfonic acid
OFET	Organic field-effect transistor
OLPT	Overlapping large polaron tunnelling
OTAB	Octyltrimethylammonium bromide
PA	Polyacetylene
PAni	Polyaniline
PC	Polycarbonate
PEDOT	Poly (3,4-ethylenedioxythiophene)
PPV	Poly(phenylene vinylene)
PPy	Polypyrrole
PTh	Polythiophene
<i>p</i> -TSA	para-Toluenesulfonic acid
PVA	Poly-vinyl alcohol

Abbreviation	Meaning
QMT	Quantum mechanical tunnelling
SDS	Sodium dodecylsulfate
SHI	Swift heavy ion
SNICS	Source of negative ions by cesium sputtering
SRIM	Stopping ranges of Ions in matter
TD	Time-domain
TGA	Thermo-gravimetric Analysis
UV-vis	UV-visible spectroscopy
XRD	X-ray diffraction

List of Symbols

Symbols	Meanings
e	Electronic charge
$\sigma'(\omega)$	Total electrical conductivity
σ_{dc}	DC conductivity
σ_{ac}	AC conductivity
s	Frequency exponent
ω	Angular frequency
$N(E_F)$	Density of states at Fermi level
R_ω	Hopping distance at a particular frequency
τ_0	Relaxation time
ε_p	Effective dielectric constant
α	Exponential decay parameter
r_p	Polaron radius
ε_0	Dielectric permittivity at free space
k_B	Boltzman constant
T	Temperature
f_0	Relaxation frequency
G	Conductance
C	Capacitance
ε^*	Complex permittivity
ε'	Real part of permittivity
ε''	Imaginary part of permittivity
ε_s	Static dielectric permittivity in the limit of zero frequencies
ε_∞	Permittivity in the limit of infinite frequencies
$\Delta\varepsilon$	Dielectric relaxation strength
α	Symmetrical distribution of relaxation times
β	Asymmetric distribution of relaxation times
M^*	Complex modulus
M'	Real part of modulus

Symbols

Meanings

M''	Imaginary part of modulus
$\phi(t)$	Kohlrausch-Williams-Watts (KWW) decay function
Z^*	Complex impedance
Z'	Real part of impedance
Z''	Imaginary part of impedance
N_0	Avogadro's number
a_o	Bohr radius
v_o	Bohr velocity
S_n	Nuclear energy loss
S_e	Electronic energy loss
ρ	Density
φ	Fluence
Q	Total charge
D	Dose
q	Charge state
X_C	Degree of crystallinity
L	Extent of polymer chain order
R	Interchain separation or hopping distance
E_g	Optical band gap energy
τ_{0M}	High temperature limit of relaxation time
E_{aM}	Activation energy for relaxation of charge carriers
σ	Formation (or damage) cross section
E_a	Hopping activation energy
W_H	Barrier activation energy
