

TABLE OF CONTENTS

Chapter	Topics	Page No.
1.	Introduction	1-12
	1.1 Types of MFC	2-3
	1.2 Advantages and disadvantages of MFC	3
	1.3 Working Principle	3-6
	1.4 Early work of MFC	6-7
	1.5 Power generation using MFC	7-9
	1.6 Factors affecting MFC	9-11
	1.6.1 PH	9
	1.6.2 Substrate concentration	9-10
	1.6.3 Temperature	10
	1.6.4 Oxygen concentration at the cathode	10
	1.6.5 Resistance	10
	1.6.6 Reactor configuration	11
	1.6.7 Proton exchange membrane	11
	1.6.8 Types of electrode materials	11
	1.7 Application of MFC Technology	11-12
	1.7.1 Waste water treatment	11
	1.7.2 Powering under water monitoring devices	11
	1.7.3 Power supply to remote sensors	12
	1.7.4 BOD sensing	12
	1.7.5 Hydrogen Production	12
2.	Review of Literatures	13-16
3.	Materials and Methods	17-22
	3.1 MFC chamber	17
	3.2 Substrate used	17
	3.3 Proton Exchange Membrane	17-18

	3.4 external circuit	18
	3.5 Electrodes used	18-22
	3.5.1 carbon paper electrode	19
	3.5.2 Stainless steel mesh	20
	3.5.3 steel wool	20
	3.5.4 Charcoal electrode	21
	3.5.5 Dry cell electrode	21
	3.5.6 Carbon brush electrode	21
	3.5.7 Brass sheet	22
	3.5.8 Galvanized iron mesh	22
	3.5.9 Graphite electrode	22
4.	Results and Discussion	23-34
	4.1 Voltage generated using different number of electrodes	23-24
	4.2 Voltage generated using electrodes of different materials	25-29
	4.3 Voltage generated using electrodes of different area	29-31
	4.4 Voltage generated using PEM of different materials	31-32
	4.5 Voltage generated using different amount of seed inoculum	32-34
5.	Conclusion	35
	5.1 Future work	35
	References	36

LIST OF TABLES

Table No.	Particulars	Page No.
1.1	Advantages and disadvantages of MFC	3
1.2	Different substrate used in MFC and maximum current produced	10
2.1	Different electrodes, substrate & PEM used in MFC and max OCV reported	13
3.1	Different combination of electrode used	19
4.1	Using 1 carbon paper electrode as anode and cathode	23
4.2	Using 2 carbon paper electrode as anode and cathode	23
4.3	Using 3 carbon paper electrode as anode and cathode	24
4.4	Using stainless steel mesh as anode and cathode	25
4.5	Using charcoal electrode of different area as anode and cathode	25
4.6	Using carbon brush as anode and carbon paper as cathode	26
4.7	Using steel wool as anode and cathode	26
4.8	Carbon electrode from 1.5V dry cell anode and graphite cathode	27
4.9	Galvanized iron as cathode and carbon paper as cathode	27

4.10	Brass as anode and carbon paper as cathode	28
4.11	Using carbon paper as anode and cathode	29
4.12	Using charcoal as anode and cathode	30
4.13	PEM made of Gelatin	31
4.14	PEM made of jute rope	31
4.15	10% seed inoculum	32
4.16	5% seed inoculum	33
4.17	2.5% seed inoculum	33

LIST OF FIGURES

Figure No.	Particulars	Page No.
1.1	The basic MFC composition	2
1.2	Schematic diagram of working of MFC	4
1.3	The two most common bacteria used in MFCs	5
1.4	Three way electron transfer by the microbes.	5
1.5	A capacitor switching circuit using MOSFET	8
1.6	(a) MFC connected in parallel (b) MFC connected in series	9
3.1	MFC setup using carbon paper electrode	17
3.2	Carbon paper	19
3.3	Stainless steel mesh	20
3.4	Steel wool	20
3.5	Charcoal electrode	21
3.6	Electrode from a dry cell	21
3.7	Carbon brush	21
3.8	Brass sheet	22

3.9	Galvanized Iron mesh	22
3.10	Pencil Graphite	22
4.1	Generation of voltage using carbon paper electrode	23
4.2	Generation of voltage using 2 carbon electrodes at the anode	23
4.3	Generation of voltage using 3 carbon paper electrodes	24
4.4	Comparison of the voltage generation using different number of electrode	24
4.5	Generation of voltage using SS mesh	25
4.6	Voltage generation using charcoal electrodes	25
4.7	Generation of voltage using carbon brush electrode.	26
4.8	Voltage generation using steel wool electrode.	26
4.9	Generation of voltage using dry cell electrode	27
4.10	Generation of voltage using GI electrode	27
4.11	Generation of voltage using brass electrode	28
4.12	Comparison between the electrodes of different materials	28
4.13	Generation of voltage using carbon paper electrode	29

4.14	Comparison of voltage generation using carbon paper electrodes of different size	29
4.15	Voltage generation using charcoal electrode	30
4.16	Comparison of voltage generation using different size of charcoal electrode	30
4.17	Generation of voltage using gelatin as PEM	31
4.18	Voltage generation using jute rope PEM	31
4.19	Comparison of voltage generation using different PEM materials	32
4.20	Voltage generation using 10% seed inoculum	32
4.21	Voltage generation using 5% seed inoculum	33
4.22	Voltage generation using 2.5% seed inoculum	33
4.23	Comparison of the voltage generation using different percentage of seed inoculums	34
