LIST OF TABLES	ii
LIST OF FIGURES	iii
1. INTRODUCTION	
1.1 Wind Power : An Overview	1
1.2 Wind Monitoring Programme in India	2
1.3 The Meteorology of Winds	2
1.4 Wind Power Potential	3
1.5 Objectives	3
1.6 Methodology	4
2. REVIEW OF LITERATURE	5
3. ESTIMATION OF WEIBULL PARAMETERS	
3.1 Representation of wind speeds	7
3.2 Distribution of wind velocity	8
3.3 Methods used for the estimation of Weibull Parameters	9
3.4 Selection of the best method(s) for the estimation of k and c	11
3.5 Results & Discussion	12
4. CAPACITY FACTOR ANALYSIS AND ESTIMATION OF ENERGY GENERATION	
4.1 Power Curve of a wind turbine	24
4.2 Details of Wind machine	25
4.3 Hours of wind speed availability between cut-in and cut-out speeds	27
4.4 Energy Generation and Capacity Factor at a site	27
4.5 Results and Discussion	28
5. ECONOMIC ANALYSIS	
5.1 Importance of Economic Analysis	37
5.2 Parameters involved in wind power economics	37
5.3 Dependence of Cost of Generation on Capacity Factor & Energy Generation	38
5.4 Parameters and assumptions considered for the study	38
5.5 Results and Discussion	39
6. CONCLUSIONS	42
REFERENCES	43

LIST OF TABLES

Table	Particulars	Page No.
1.1	Wind monitoring programme for the NE region	3
3.1	Reference frequency data for a duration of one year for a site	13
3.2	Estimation of k and c by Graphical Method	14
3.3	Determination of k and c by EPF Method	15
3.4	Values of k and c for the reference data as obtained by different methods	15
3.5	Calculation of Co-efficient of Determination (R^2) and Root-Mean-Square-Error (RMSE) for Graphical Method	16
3.6	Calculation of R^2 and RMSE for Least Squares Linearization Method	17
3.7	Calculation of R^2 and RMSE for Standard Deviation Method	18
3.8	Calculation of R^2 and RMSE for Justus Approximation	19
3.9	Calculation of R^2 and RMSE for Maximum Likelihood Method	20
3.10	Calculation of R^2 and RMSE for EPF Method	21
3.11	Comparison of R^2 and RMSE values for different methods	22
3.12	Estimation of wind power density at various sites	23
4.1	Machine data	24
4.2	System specifications – V29 (225 kW)	25
4.3	System specifications – PWT10000 (10 kW)	25
4.4	System specifications – PWT50000 (5 kW)	26
4.5	System specifications – PWT400 (400 watt)	27
4.6	Hours of wind speed between $u_c = 3.5$ m/s and $u_o = 25$ m/s for 225 kW	28
4.7	Hours of wind speed between $u_c = 2.5$ m/s and $u_o = 20$ m/s for 400 W	29
4.8	Hours of wind speed between $u_c = 2.5$ m/s and $u_o = 15$ m/s for 10 kW	30
4.9	Capacity Factors and Annual Energy Generation for 225 kW	31
4.10	Capacity Factors and Annual Energy Generation for 400 W	32
4.11	Capacity Factors and Annual Energy Generation for 5 kW	33
4.12	Capacity Factors and Annual Energy Generation for 10 kW	34
5.1	Cost data for machines	39
5.2	ALC for 400 W system at different sites	39
5.3	ALC for 5 kW system at different sites	39
5.4	ALC for 10 kW system at different sites	40
5.5	Comparison of ALC of two machines	41

LIST OF FIGURES

Figure	Particulars	Page No.
3.1	Typical time series distribution (30 s duration)	7
3.2	Typical monthly average wind speed	7
3.3	Typical wind speed frequency distribution	8
3.4	Weibull Probability Density Function at $c = 1$	9
3.5	Determination of k and c by Graphical Method	15
3.6	Probability Density Functions ($f(u_i)$) for six different methods compared to probability of observed data	22
4.1	Power Curve of a typical WEG	24
4.2	Power curve of V-29 (225 kW)	25
4.3	Power curve of PWT-10000 (10 kW)	26
4.4	Power curve of PWT-5000 (5 kW)	26
4.5	Power curve of PWT-400 (0.4 kW)	27
4.6	Capacity Factors of different machines at different sites	34
5.1	ALC of different machines at different sites	40
