CONTENTS

1 Introduction 1

1.1 Project Profile 1

1.1.1 Project Title 1

1.1.2 Problem Statement 1

1.1.3 Undertaken by 1

1.1.4 Guided by 1

1.1.5 Organization 2

1.1.6 Location 2

1.1.7 Environment 2

1.2 Test Automation for Web Applications 2

1.3 Testing terms 3

2 Literature Survey 4

2.1 Introducing Selenium 4

2.2 Selenium's Tool Suite 4

2.2.1 Selenium 1 (aka. Selenium RC or Remote Control) 4

2.2.1.1 How Selenium RC Works 5

2.2.1.1.1 RC Components 5

2.2.1.1.2 Selenium Server 6

2.2.1.1.3 Client Libraries 6

2.2.1.2 Selenium RC Architecture 7

2.2.1.2.1 The Same Origin Policy 7

2.2.1.2.2 Proxy Injection 7

2.2.1.2.3 Heightened Privileges Browsers..... 9

2.2.2.3 Handling HTTPS and Security Popups..... 10

2.2.3 Selenium IDE..... 10

2.3 XPath..... 12

3 Initial System Study..... 13

3.1 About webMethods Broker..... 13

3.1.1 Overview..... 13

3.1.2 Publish-and-Subscribe Model..... 13

3.1.3 Broker's Relationship with Other webMethods Components..... 14

3.1.4 webMethods Broker Architecture and Components..... 16

3.1.5 Broker Security Model..... 24

3.2 Existing test automation using QTP..... 24

3.3 Limitations of using QTP..... 25

3.4 Problem Definition..... 25

3.5 The Proposed System..... 25

3.6 Why Selenium? 25

3.7 Scope of the project..... 25

3.8 Feasibility analysis..... 26

3.9 SRS (Software Requirement Specification)..... 26

3.10 Test Design Considerations..... 27

3.10.1 Introducing Test Design..... 27

3.10.1.1 Types of Tests..... 27

4 Implementation..... 29

4.1 Screen based concept of Automation with Selenium..... 29

4.2 Frameworks used..... 34

4.2.1 STAF (Software Testing Automation Framework)..... 34

4.2.2 CIS (Continuous Integration Server) 35

4.2.2.1 Key Features of CIS..... 36

4.2.3 ALF (Automation League Framework)..... 37

4.2.3.1 Key features of ALF..... 37

4.2.3.2 ALF architecture..... 37

4.3 Typical CIS scenario..... 39

5 System Testing..... 43

6 Conclusion and future work..... 45

7 Bibliography.....47
