List of Figures

1.1	Brain controlled wheelchair	3
2.1	A typical BCI architecture	4
2.2	Different cortex regions of the brain	7
2.3	Typical <i>sodium potassium pump</i>	8
2.4	Delta wave	9
2.5	Theta wave	9
2.6	Alpha wave	10
2.7	Mu or Sensorimotor wave	10
2.8	Beta wave	10
2.9	Gamma wave	11
2.10	Histogram for distribution of BCI research documents in the period 1993-2013 A.D.	14
2.11	The network of links between the research documents obtained from <i>Gephi</i>	15
2.12	Tanaka's brain controlled wheelchair. Navigation is by imagination of left or right limb movements	20
2.13	Iturrate's brain controlled wheelchair (a) A snapshot of a participant navigating along a corridor. (b) Information represented in the visual display, which is an environment abstraction displayed from the users point of view. The user can select which goal to reach using a P300	21
2.14	A typical confusion matrix	26
2.15	Linear SVM Classification	27
2.16	Non-linear SVM Classification	28
2.17	<i>k</i> -fold Cross Validation	31
3.1	Proposed Architecture	32
3.2	Timing protocol for MI signal extraction	33
4.1	The timing scheme- first two sessions (01T, 02T) contain training data without feedback	37
4.2	The timing scheme- the last three sessions (03T, 04E, 05E) with smiley feedback	37

4.3	Bispectrum of the Left hand Motor Imagery Signal	38
4.4	Bispectrum of the Right hand Motor Imagery Signal	39
4.5	Non-redundant region of the bispectrum for real signals where the features are calculated. Frequencies are shown normalized by the Nyquist frequency	40
4.6	Coarse grid search for finding C and γ , Subject B0101T	42
4.7	Fine grid search for finding C and γ , Subject B0101T	42
4.8	Coarse grid search for finding C and γ , Subject B0401T	43
4.9	Fine grid search for finding C and γ , Subject B0401T	43
4.10	Confusion Matrix for the Subject B0101T	44
4.11	Confusion Matrix for the Subject B0401T	44
6.1	PowerLab 26T	57
6.2	Brain Cap	57
6.3	Electrode Board Adapter	58
6.4	Body harness	59
6.5	Ear Electrode	59
6.6	Disposable Sponge Disks	60
6.7	Needle/ Syringe Kit	60
6.8	Electro Gel	61
6.9	Special head measuring tape	61
6.10	Cap Straps	62
6.11	Ivory ®Liquid Detergent	62
6.12	The LabChart Software	63
6.13	<i>Ostrich Mobility Instruments Tetra EXi</i>	65
6.14	Grid search for real time implementation	67
6.15	Translation algorithm architecture	68
6.16	Motor arrangement for joystick movements	69
6.17	The driver circuit	70
A.1	The subject	74
A.2	Locating Nasion	75
A.3	Measurement of head circumference	75
A.4	Marking Nasion	75
A.5	Marking FPz	76
A.6	Measuring and locating $FP1$ and $FP2$	76
A.7	Placing sponge disk	76
A.8	Filling syringe with electro gel	77
A.9	Injecting gel to ear electrodes	77
A.10	Placing the brain cap	77
A.11	Gel injected into Cz	78
A.12	Gel injected into $C4$	78
A.13	Subject Ready for Acquisition	79
A.14	Neutral position: 1	79

A.15 1st backward movement	80
A.16 Neutral position: 2 (after the 1st backward movement)	80
A.17 1st forward movement	81
A.18 Frame grid of the video compiled in the project	82

List of Tables

4.1	List of event types (the first column contains decimal values and the second hexadecimal values).	36
4.2	Classification Accuracy for Subject B0401T	41
4.3	Classification Accuracy for Subject B0401T	41
4.4	Classification accuracies of different MI duration in the timing protocol	46
4.5	Experiment on <i>C3</i> only with BE1, MMOB and WCOB	47
4.6	Experiment on <i>C4</i> only with BE1, MMOB and WCOB	47
5.1	Classification accuracies on Two Channel	50
5.2	Classification accuracies on Single Channel	50
5.3	Correlation coefficient of Statistical Features	52
5.4	Correlation Coefficient of HOS Features	52
5.5	Accuracies of Reduced Feature Set	53
5.6	Average Classification Accuracy	53
5.7	Average Classification Accuracy	54
5.8	Accuracies obtained after combination of features (Statistical and Higher Order Statistical) with Band Pass filter and their k - Fold Cross Validated Accuracies, ($k= 10$)	55
6.1	k - Fold Cross Validated Accuracies of Real Time Implementation	67
6.2	Navigation table	69
