ACKNOWLEDGEMENT

This project could not have been done without the help of a lot of other people. Without them this experience would definitely not have been as special and gratifying as it was. So, it is our pleasure to have the opportunity to express our thanks to those who have ever helped us.

We would like to thank our supervisor Professor Dhruba K. Bhattacharyya. We will always be grateful to him for providing us this valuable opportunity to have worked under his guidance, and for his constructive criticism and patience to guide us throughout our project. It has been an excellent opportunity for us and we have learnt a lot from him.

We owe a very big thanks to all our faculty members for offering their valuable suggestions and ideas at times.

We sincerely thank Mr. M. H. Bhuyan, Mr. Prasanta Gogoi , Mr. Ajay Kr. Sharma, Mr. Arun Chetri and Mr. Raghvendra Choudhary for their assistance which was invaluable throughout our experiments. We really could not have done it without them.

We would also thank our friends, including some special ones, whose help and moral support gave us the confidence of completing the project well.

For those whose names we did not mention here, we offer our sincerest apologies but know that those that have made this experience so special will never be forgotten.

Last but not the least we cannot forget to thank our parents. We could not have been where we are without their prayers, blessings and hard work. This dissertation is dedicated to them.
